

eHeroes 2nd General Meeting  
10 - 12 March, 2014 Davos, Switzerland

# RESIK MEASUREMENTS OF PARTICLE BACKGROUND RADIATION & NON- SOLAR EMISSION

*J. Sylwester, W. Trzebiński, M. Kowalinski, J.  
Bakala, Z. Kordylewski, J. Barylak, S. Gburek*

Space Research Centre, PAS, Wrocław,  
Poland

*I. Myagkova*

Skobel'tsyn Institute of Nuclear Energy,  
Moscow State University, Russia

# outline

- ▣ Construction & placement of RESIK detectors
- ▣ Signals useful to study particle environment
- ▣ Calibration of RESIK particle signal against particle spectrometer MKL
- ▣ Conclusions and further work-
- ▣ Possible collaborations

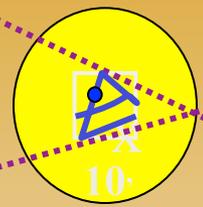

# CORONAS-F operation

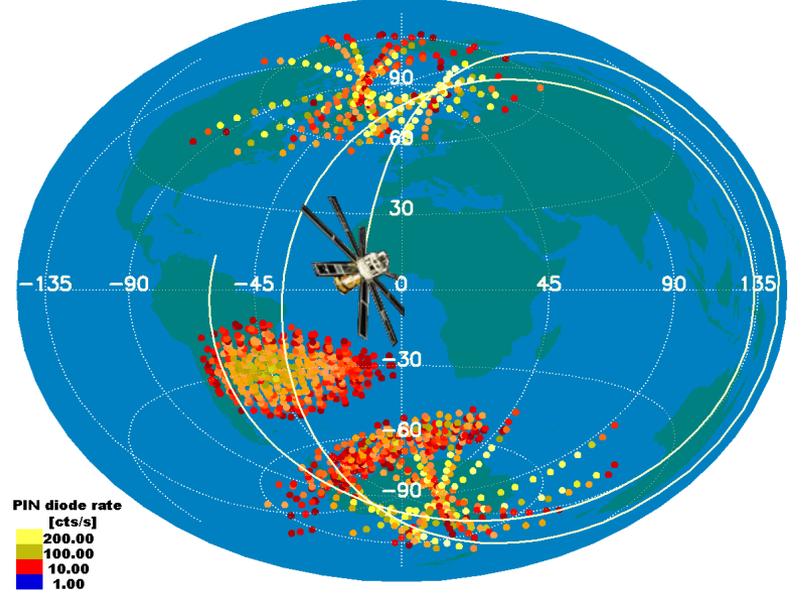

SS-14 Cyclone

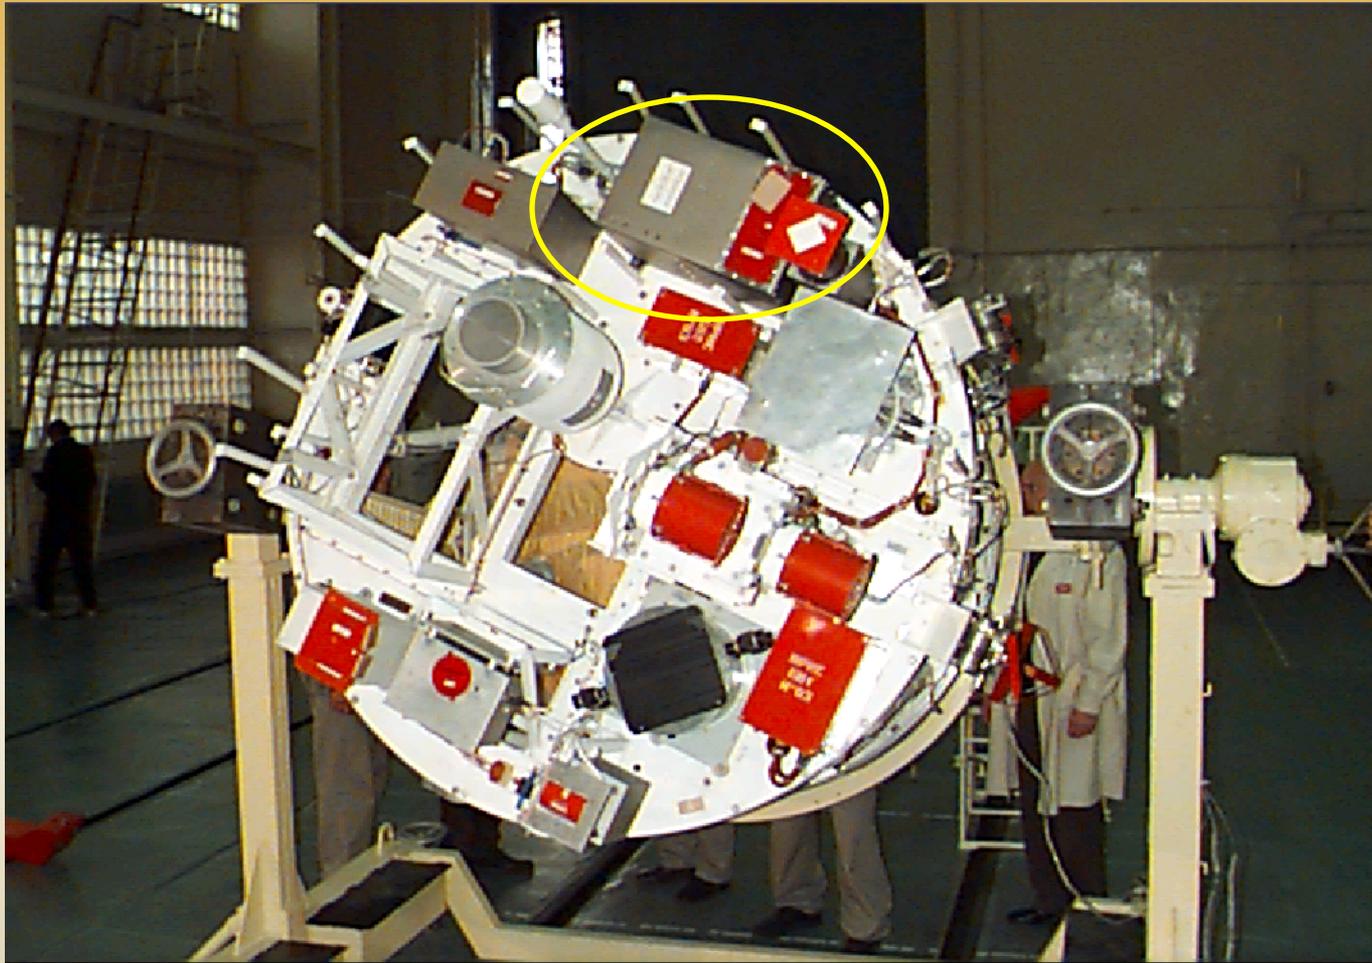

31 July 2001-Dec. 2006  
polar orbit, 95min,  
~500 km  
semi-Sun-synchronous

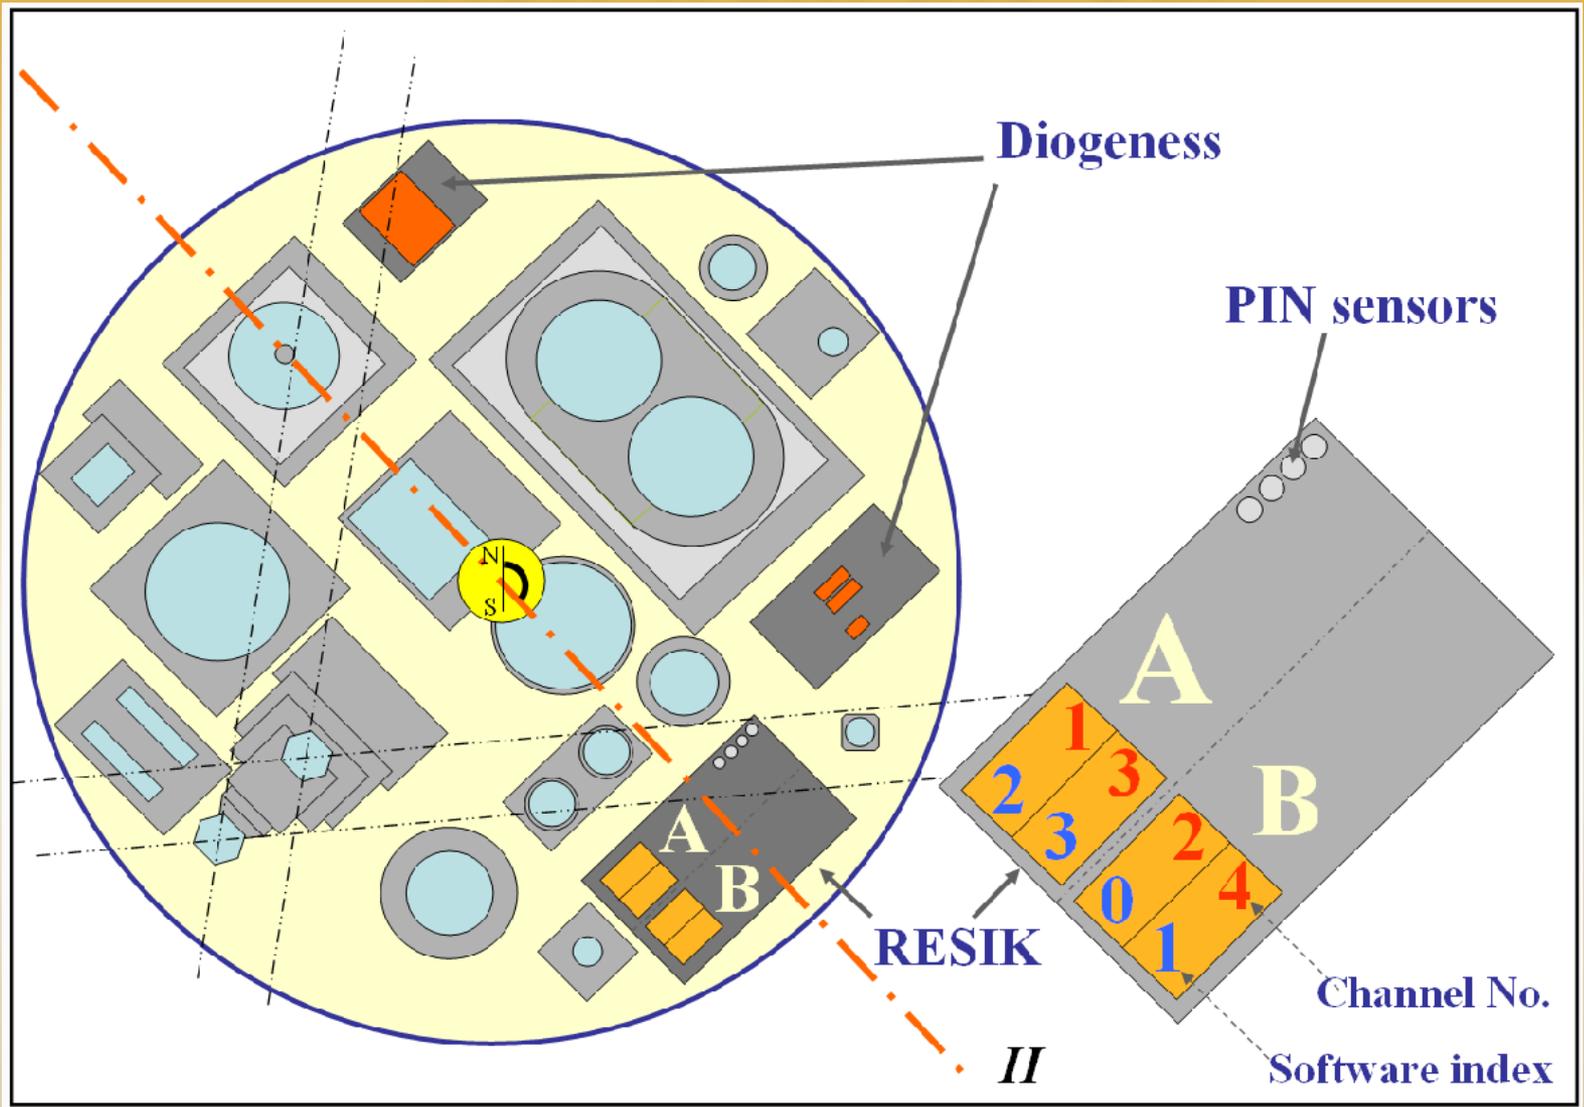

2002/04/01 - 2002/05/01

# RESIK on CORONAS-F

# CORONAS-F payload view from the Sun

# RESIK detectors

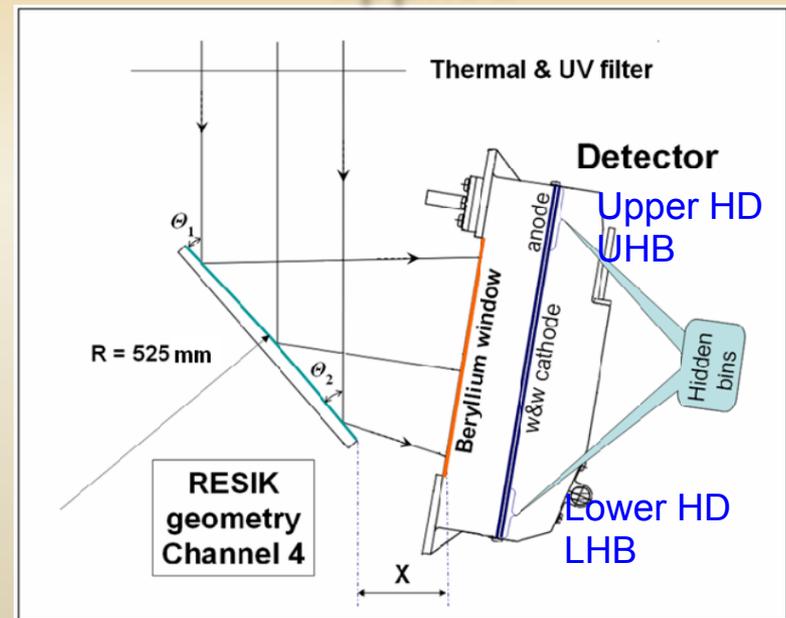

This was a great idea to put 4 PIN detectors inside RESIK the detectors were of the type NTE3033 Infrared Photodiode 7 x 8 mm behind 2 x 80 micron Al foils diameter 14 mm. This part was covered by MLI

The main spectroscopy 4 detectors contained parts of anodes (hidden bins HB) upper (better screened and lower). Every signal recorded on anode has been pulse –height analysed into 32 bin spectrum. Its energy range depends on HV applied

Titanium cover with MLI removed

# RESIK signals with particle signatures

- ▣ PIN detectors
  - 4 independent „identical” detectors (4 x20 mln data)
- ▣ RESIK PHA
  - 2 independent detectors with regulable HV
  - 4 independent PHA 32 bin data (4 x32 x 20mln/4 since commuted)
- ▣ Satellite conditions
  - Sat day/night, longest night 25 min →0 for long days
  - SAA, polar ovals transition, geomagnetic storms
- ▣ RESIK spectral hidden bins
  - UHB,LHB x 2 mln spectral measurements
- ▣ Total of 40 mln points, up to 40 at the same time

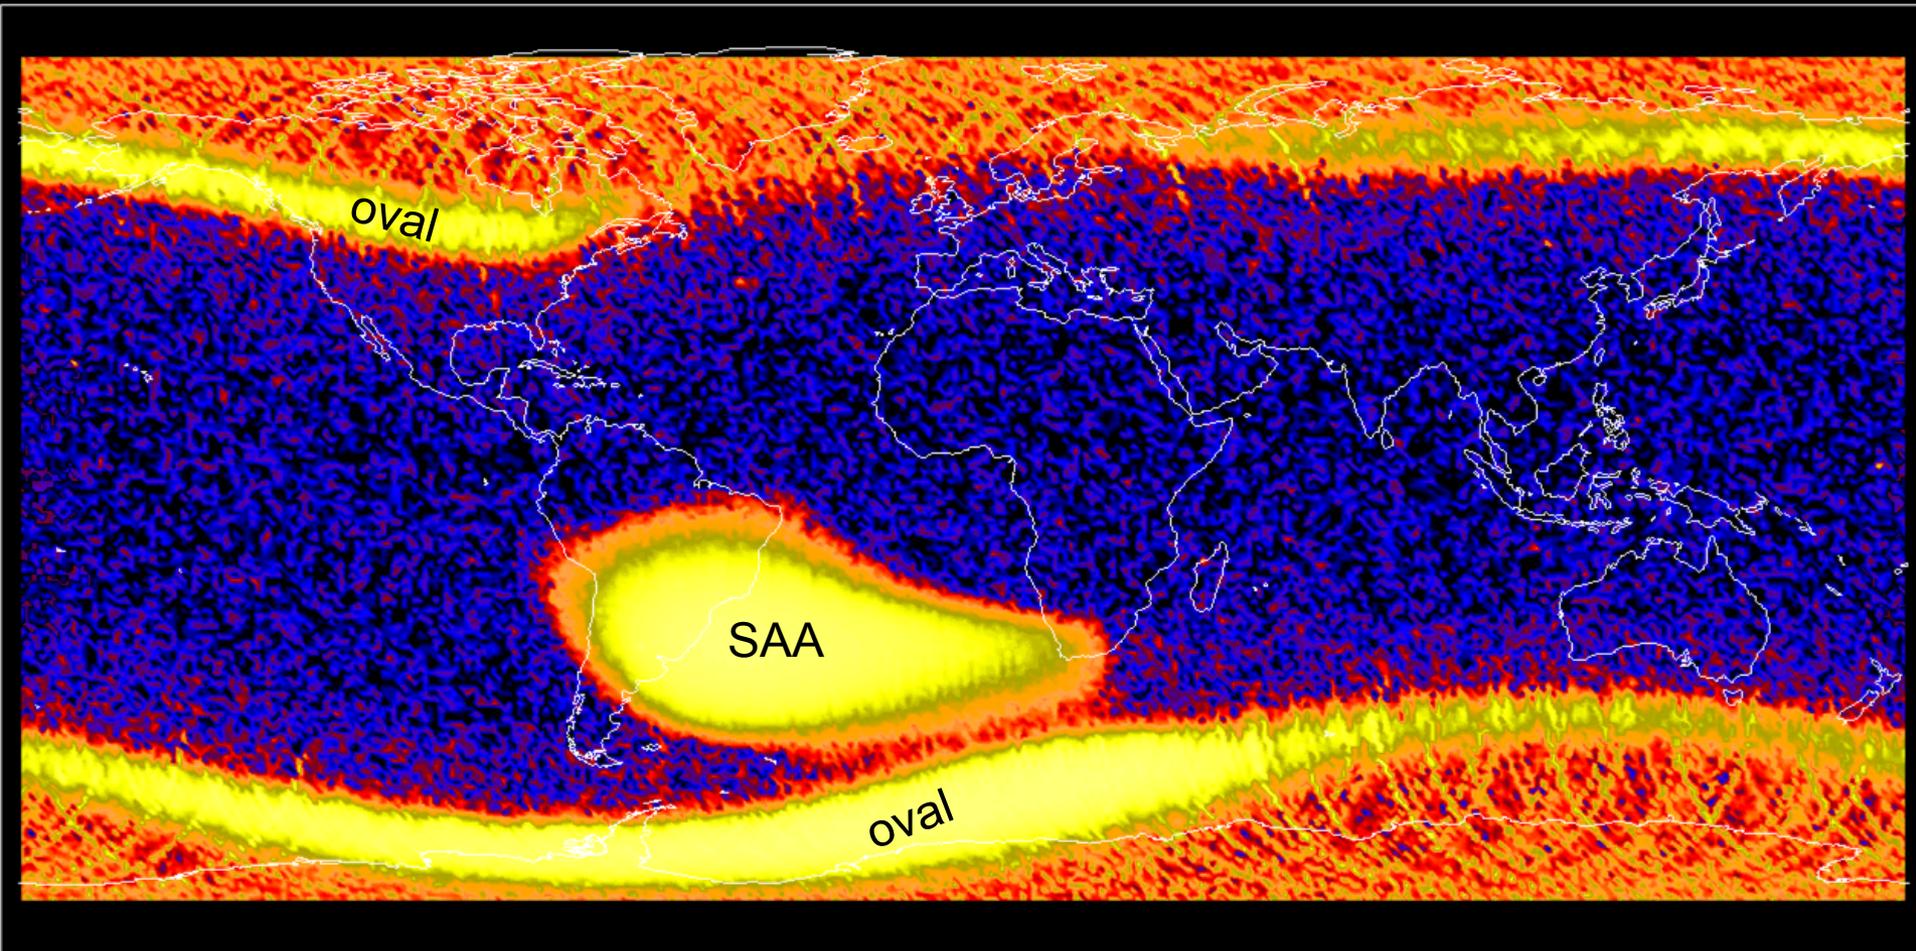

# RESIK important periods of operation

- ▣ Early „learning” operations between 2001-Aug-24 12:19:48 & 2001-Oct-07 00:59:34
  - Const HV ON
  - Const DGI=10s
- ▣ Const DGI=20 s 2001-Oct. & 2002 Feb.
- ▣ ADS Tweaking 2002-Feb. & 2002 Jul.
  - Constant DGI = 10s
- ▣ DGI =8 or 2s 2002-Jul. & 2003 Apr.
- ▣ DGI =1 s 2003-Apr & 2003 Sep.

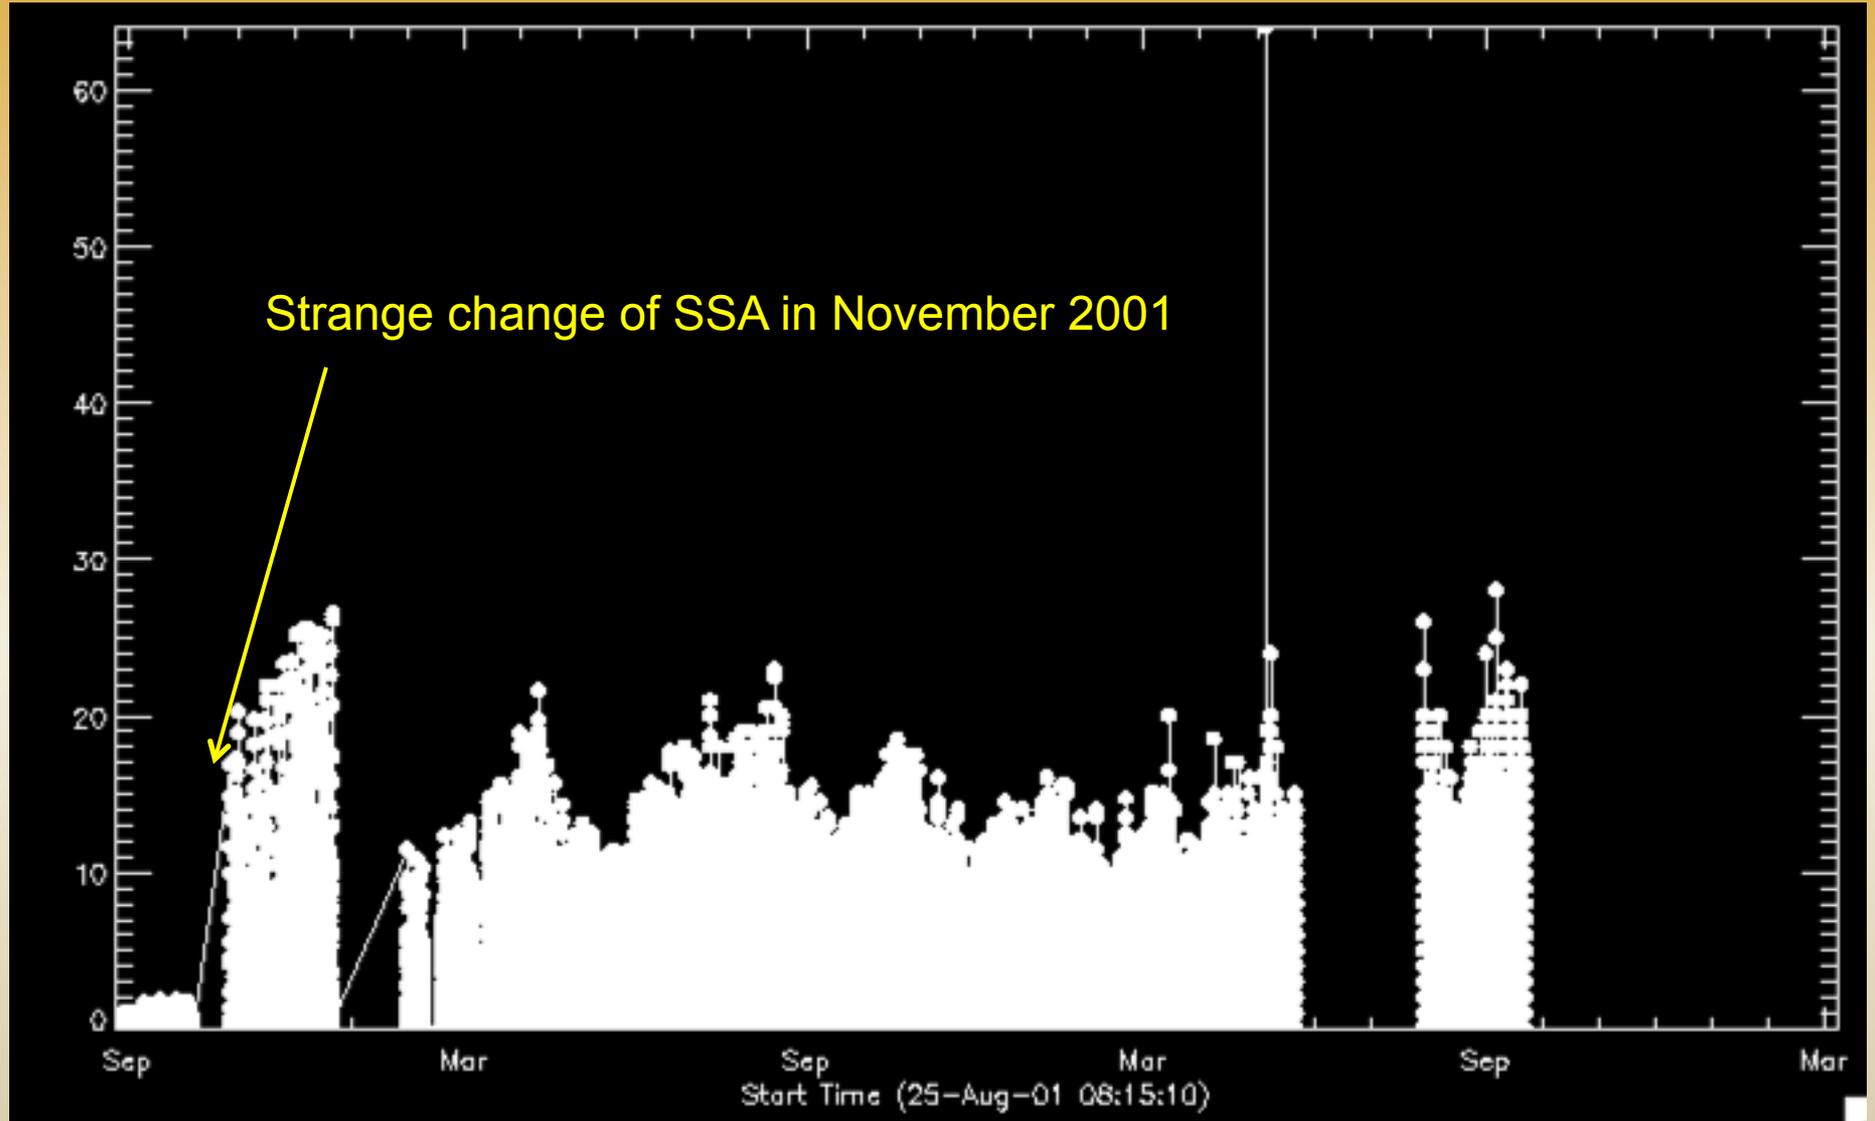

PIN sum:  $3e7$  events  
mission long 1 x1 deg

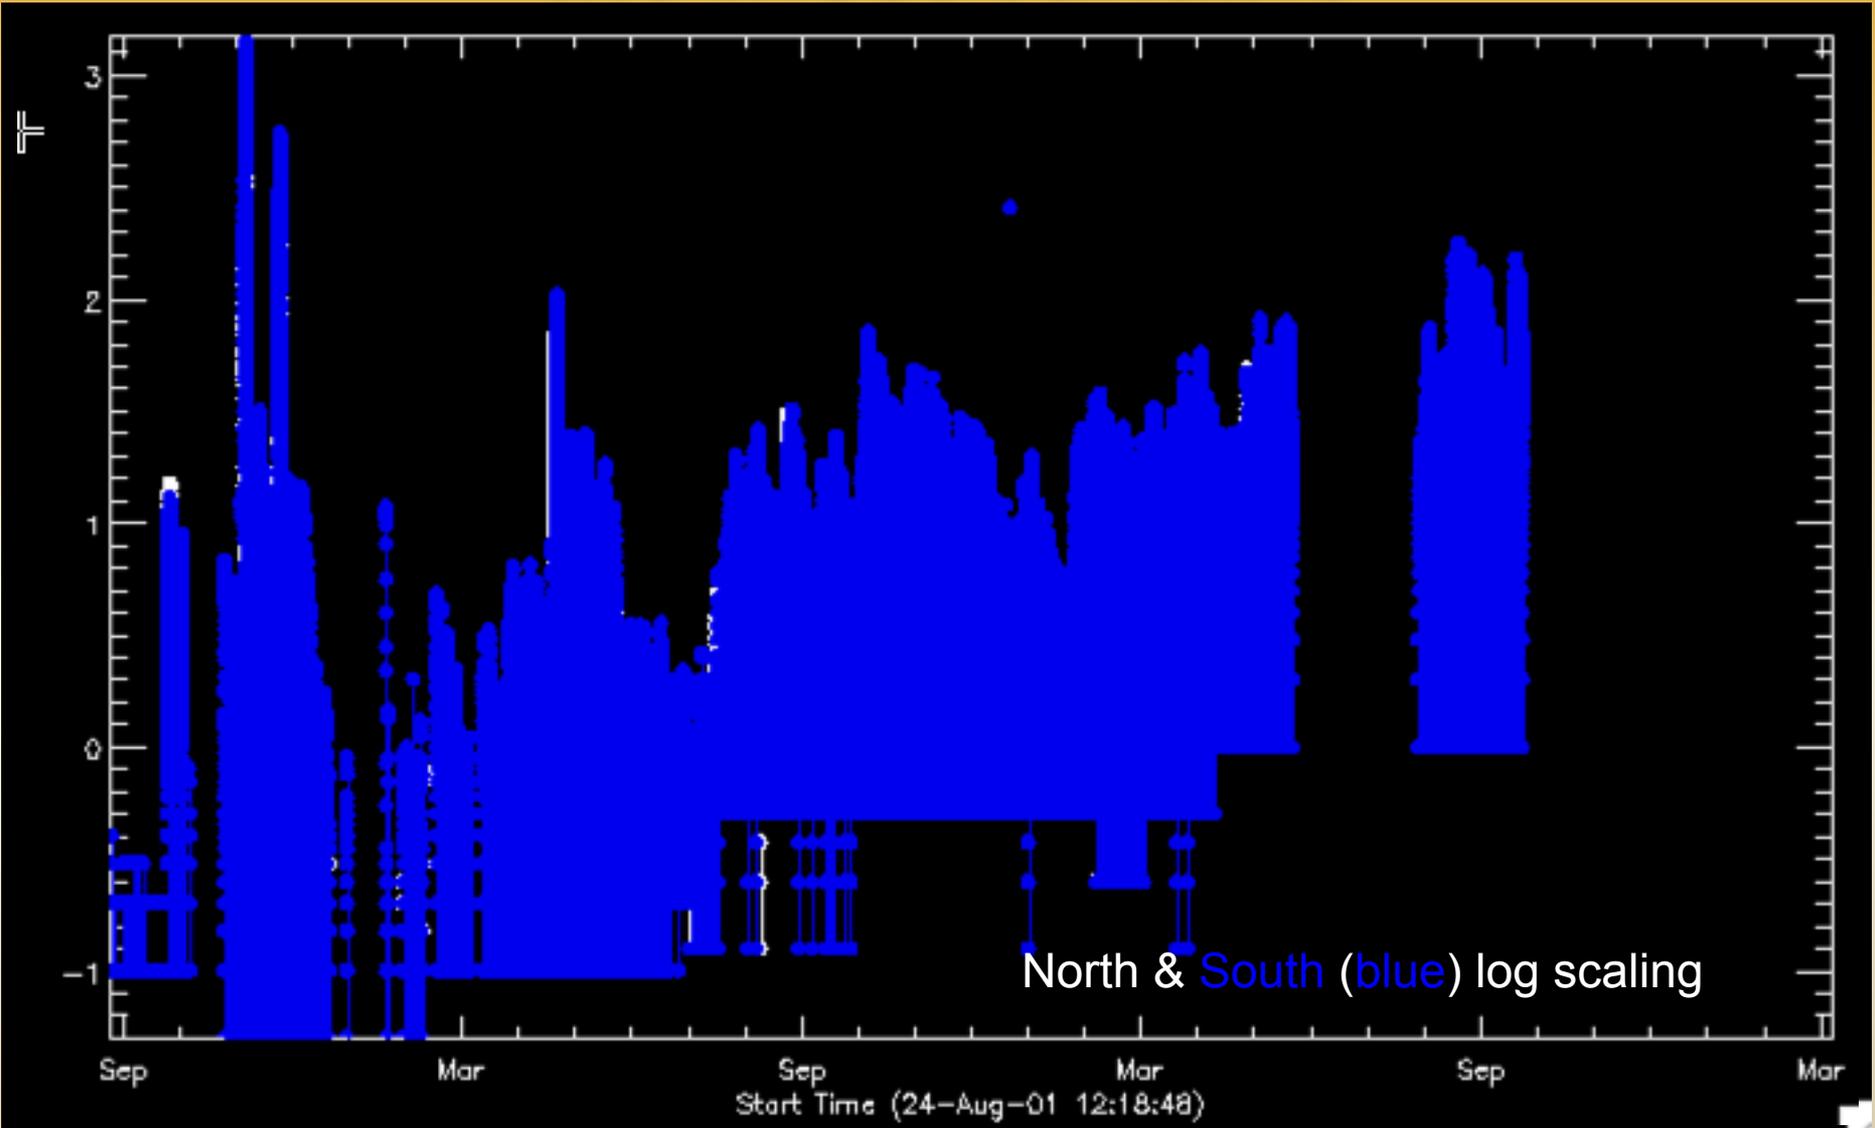

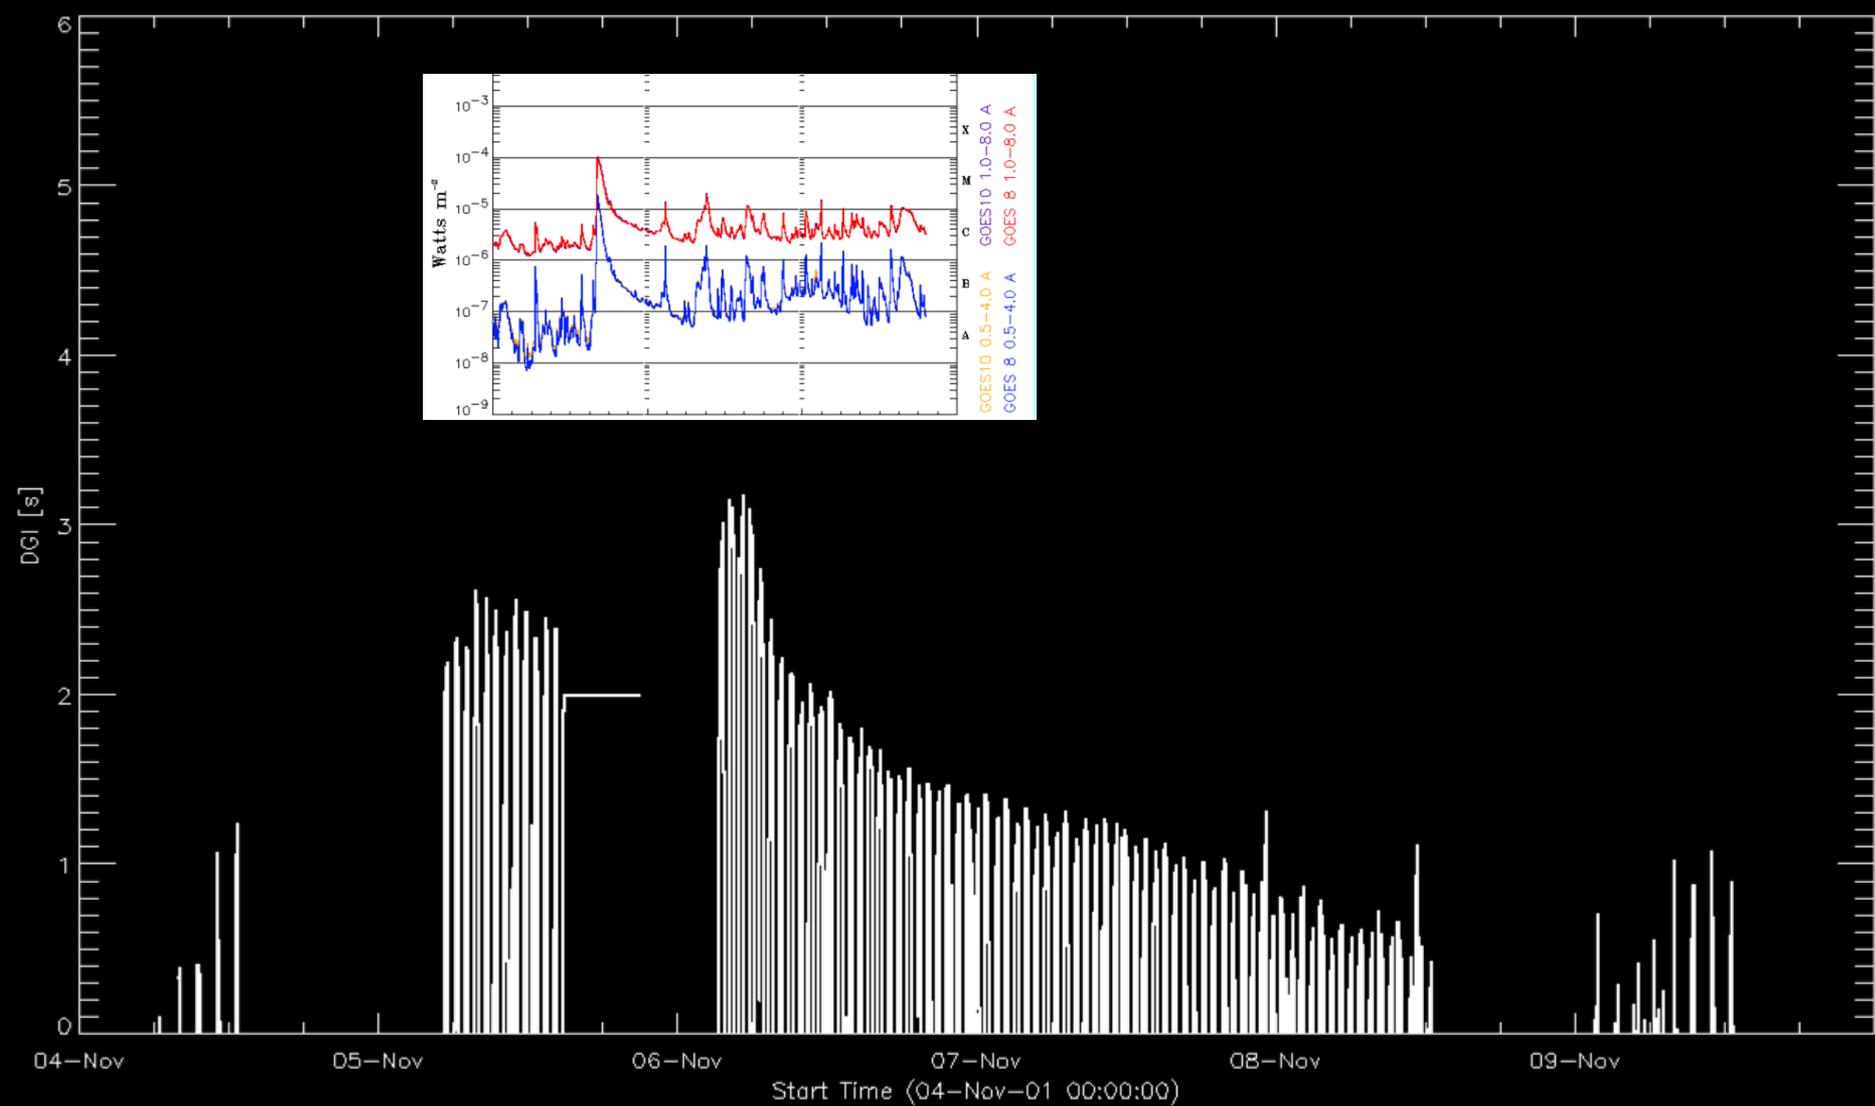

# Rates in SAA

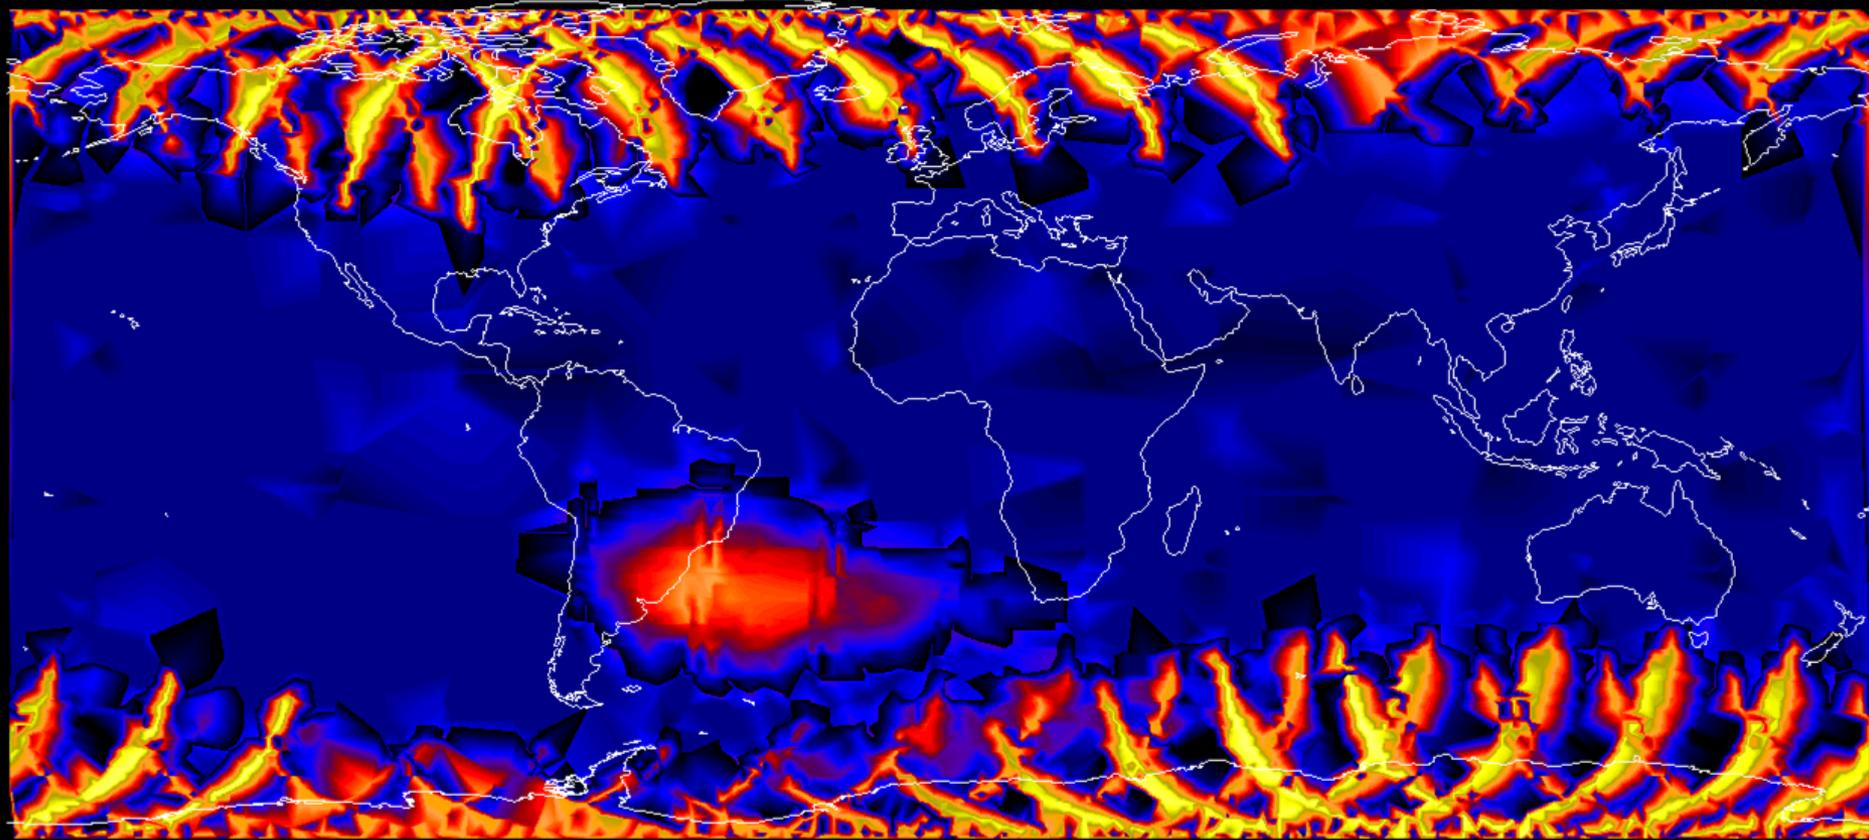

# Polar regions the most variable

# What is seen during a medium size storm?

# RESIK within CORONAS-F

# RESIK PHA Spectra

## Example PHA channel #2 HV:1480 V

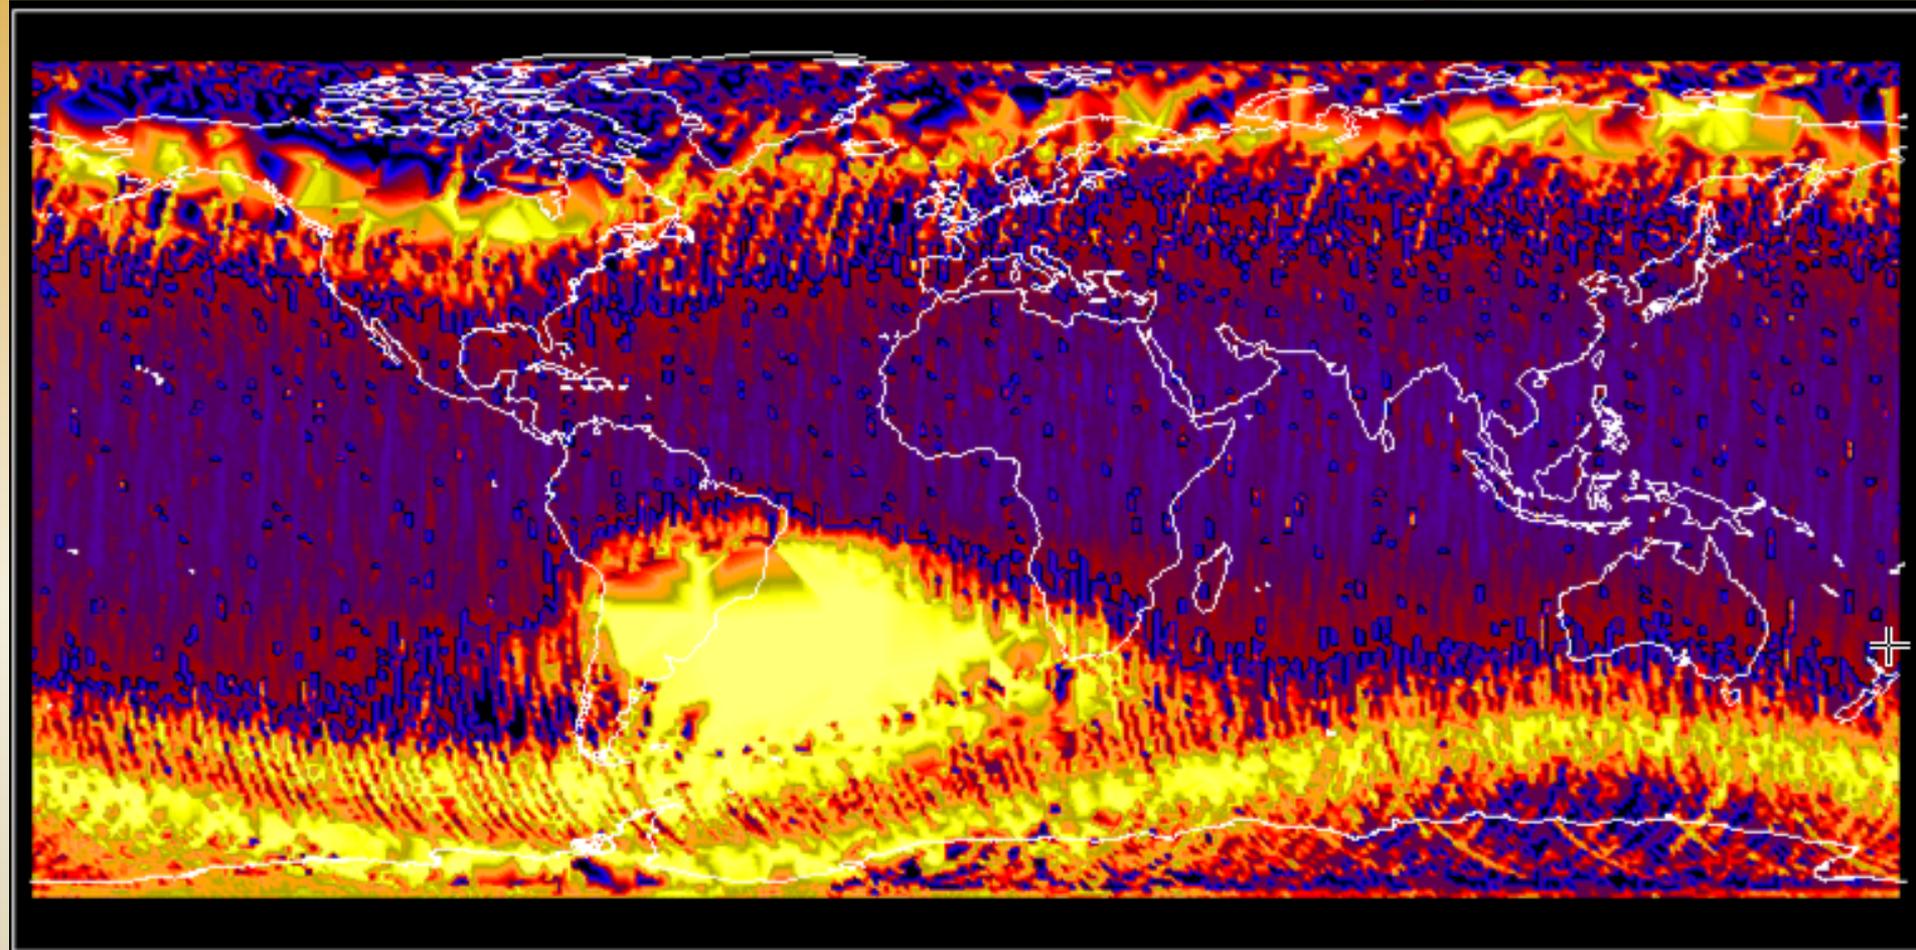

# Terrestrial 0.5 keV emission S/C nights

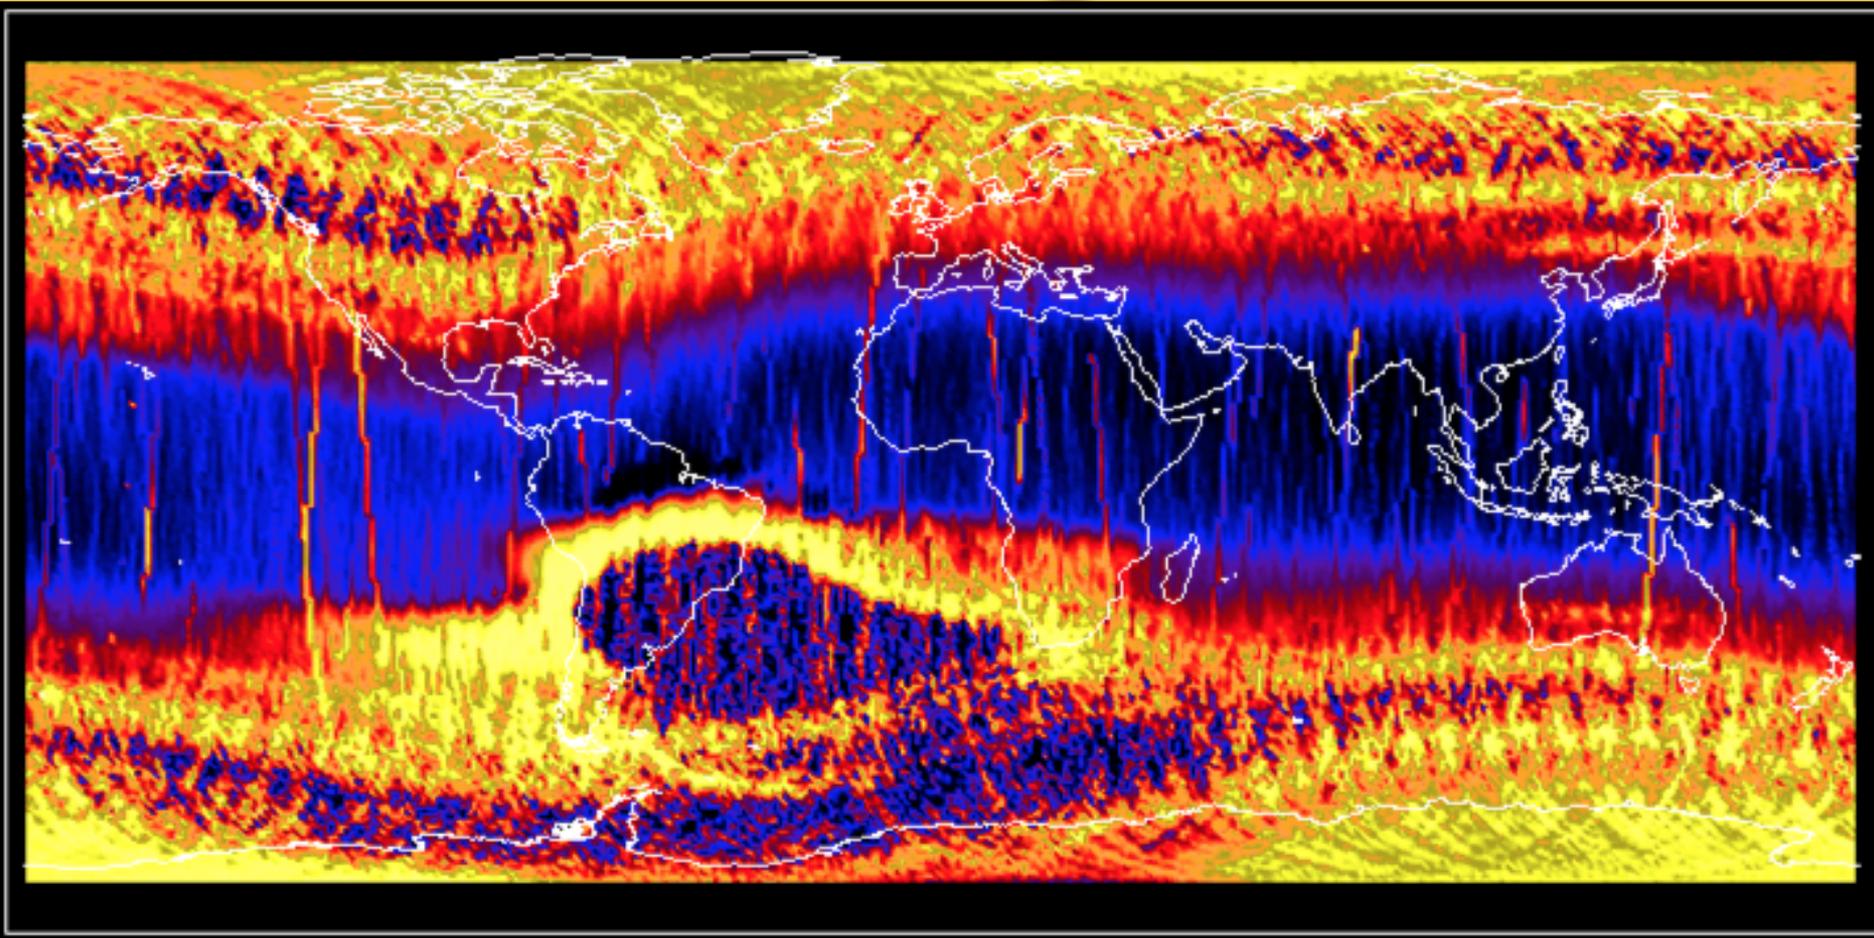

# Terrestrial 0.5 keV emission S/C days

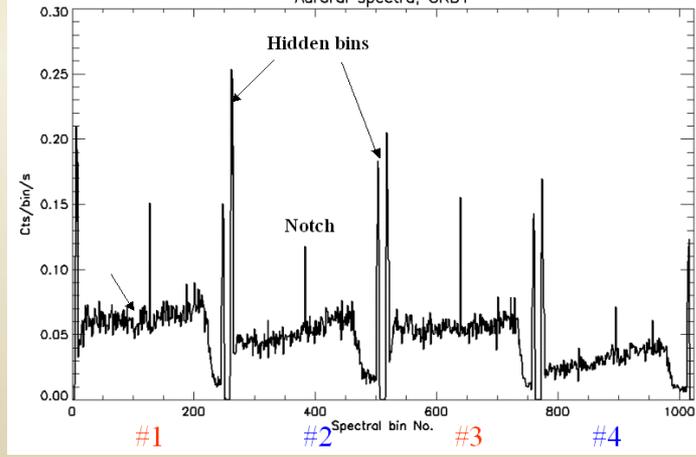

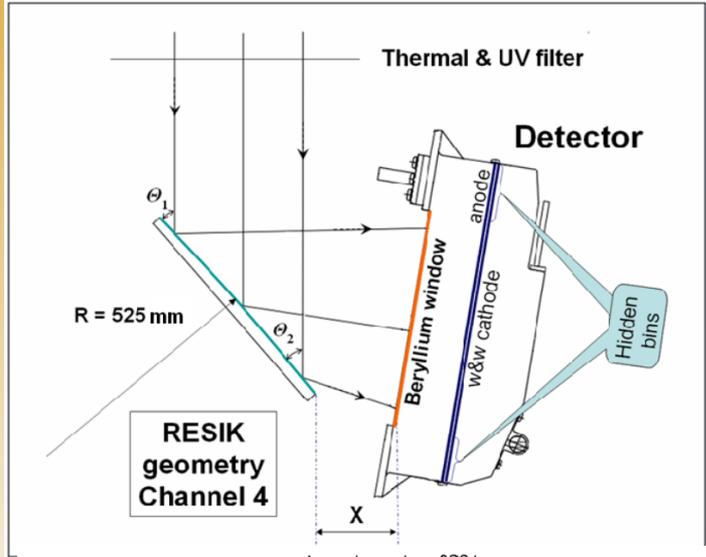

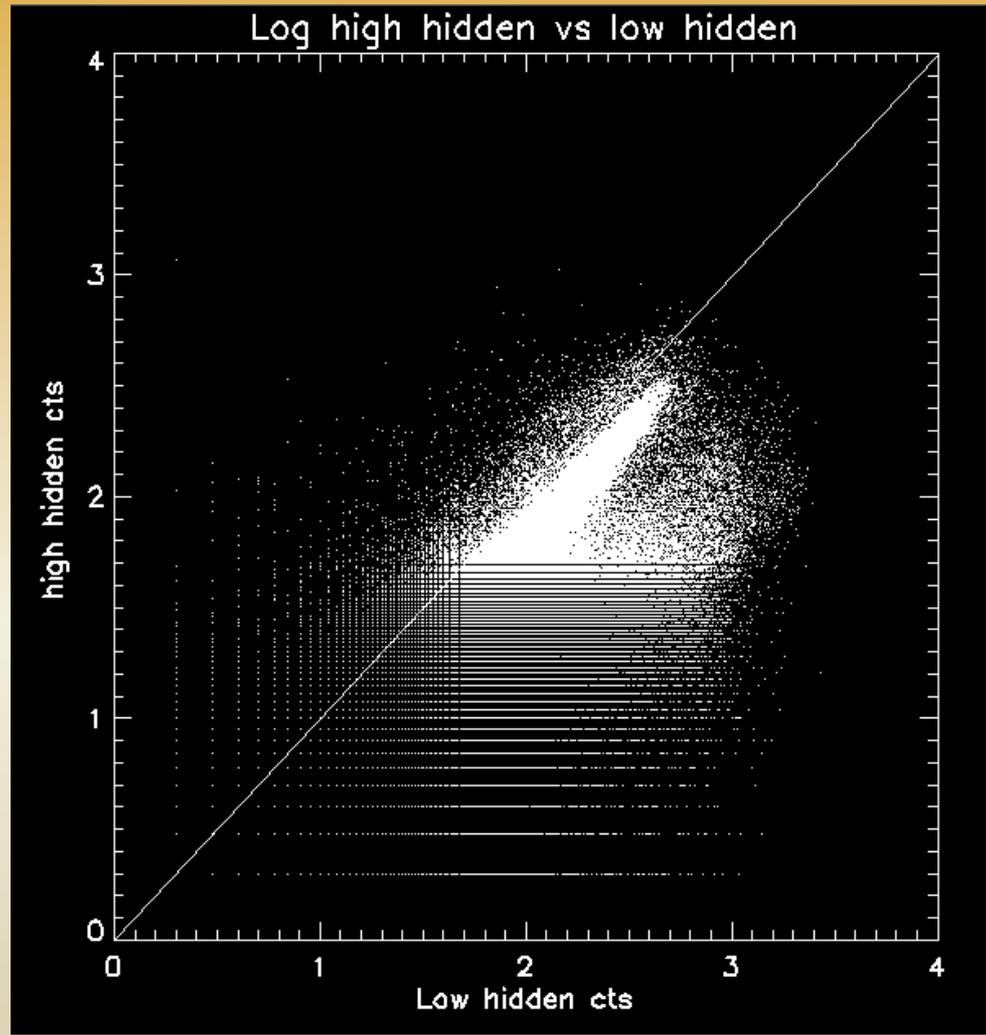

# Terrestrial 1.5 -7 keV emission S/C nights

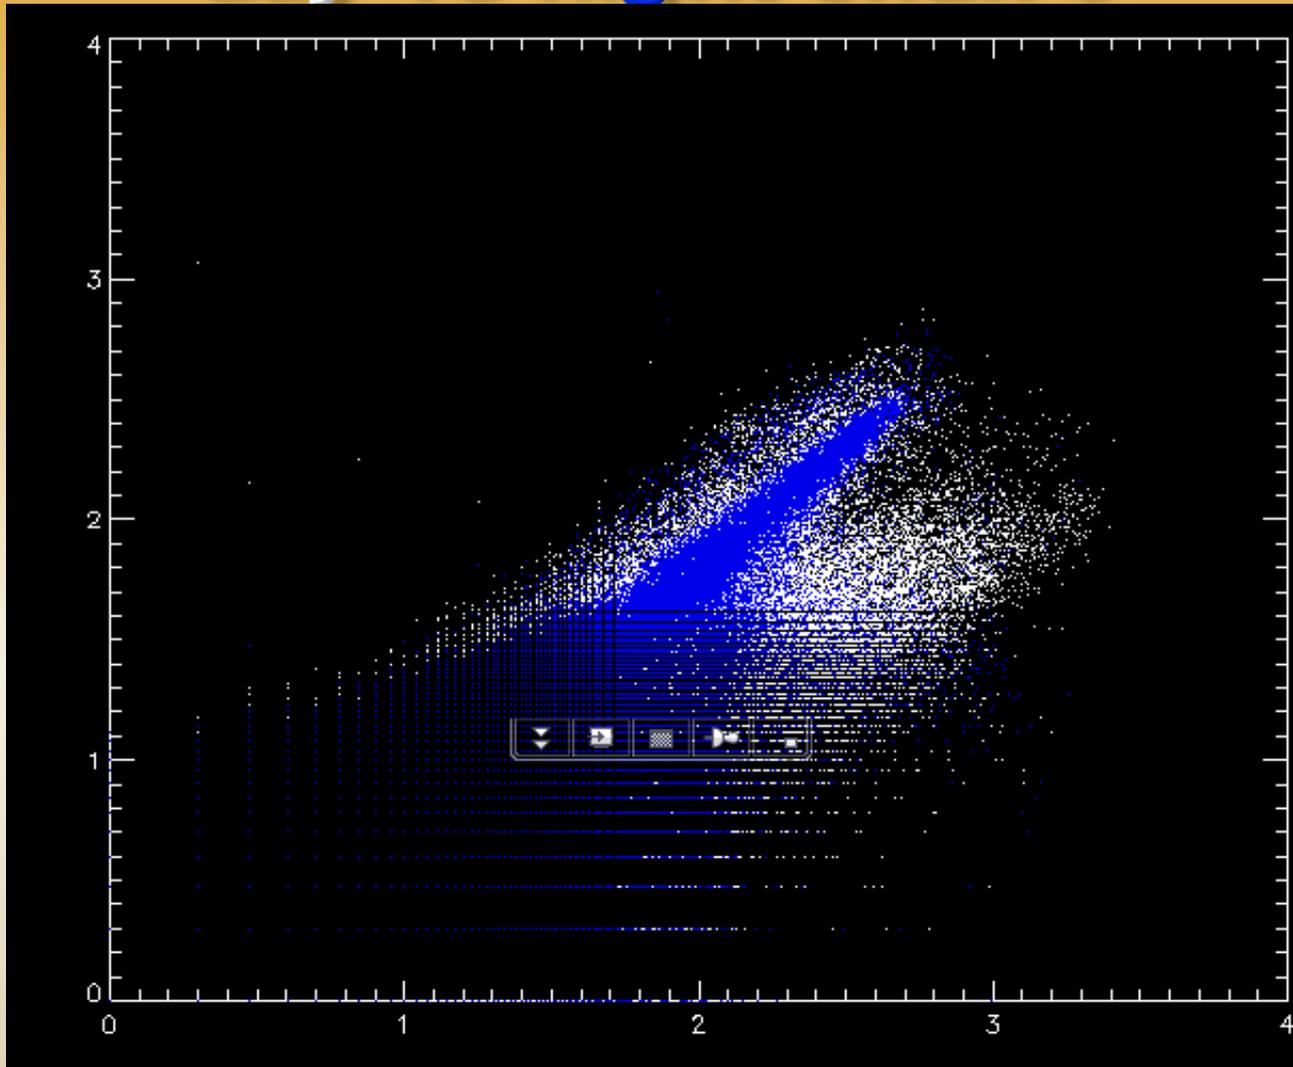

# 31<sup>st</sup> bin 1 x 1 deg resolution

# Hidden bins correlations

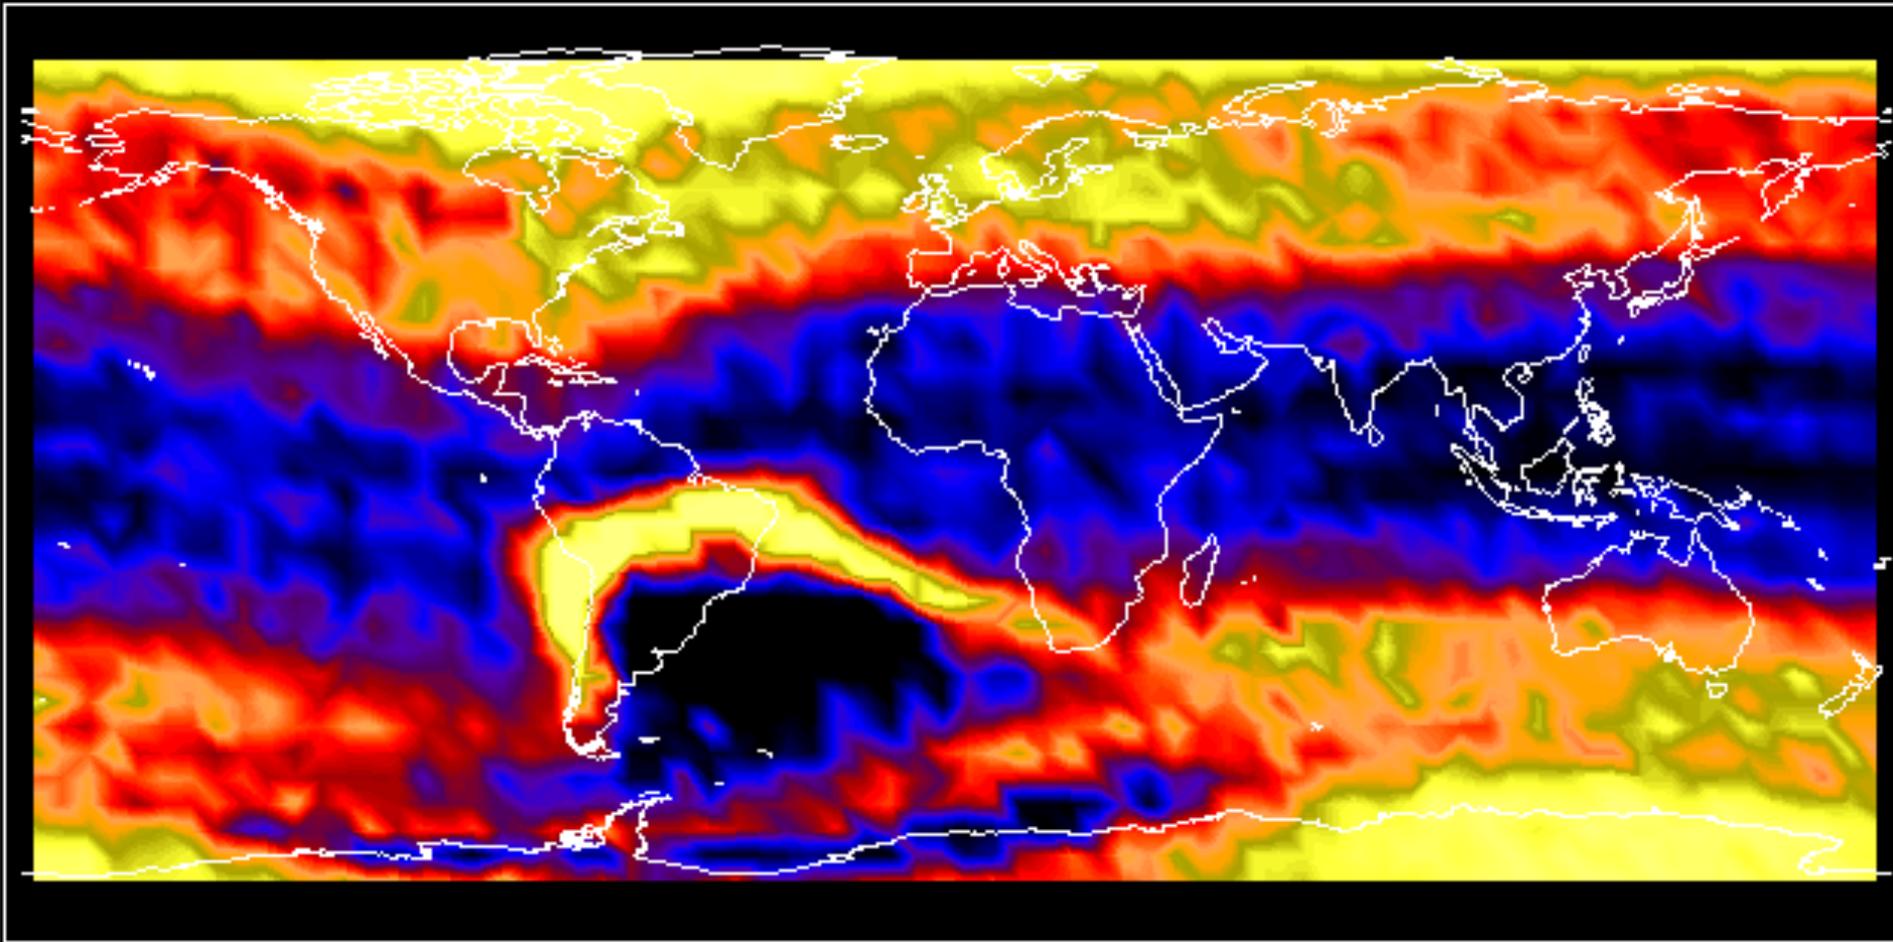

# Hidenn bins day vs night chan 0

# High hidden chan 0

# Non-solar contributions

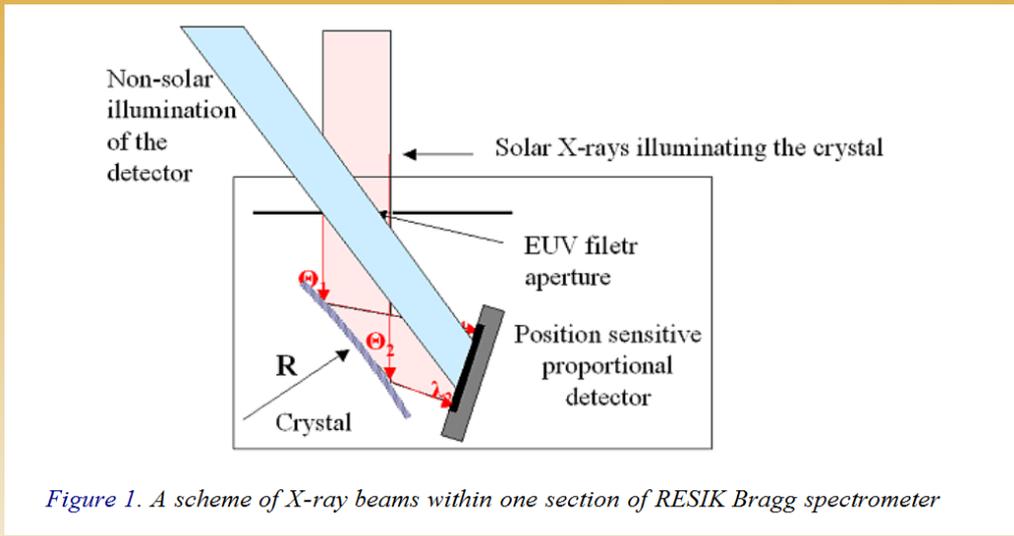

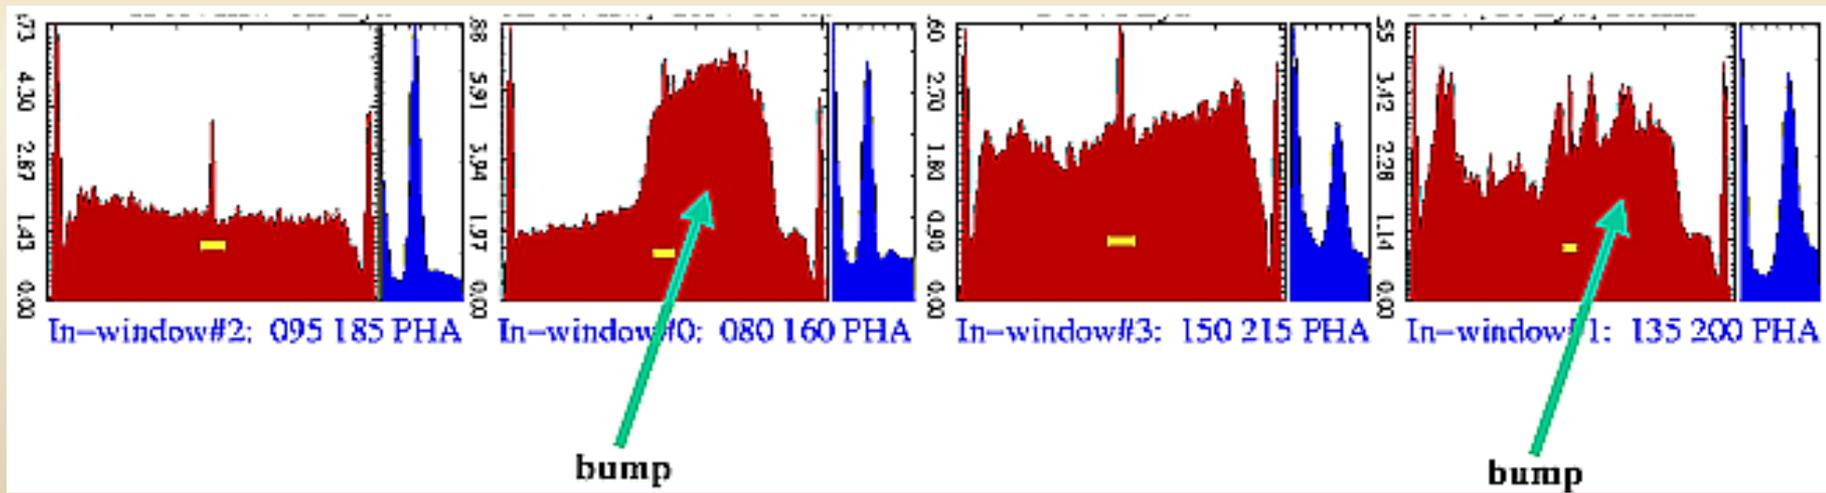

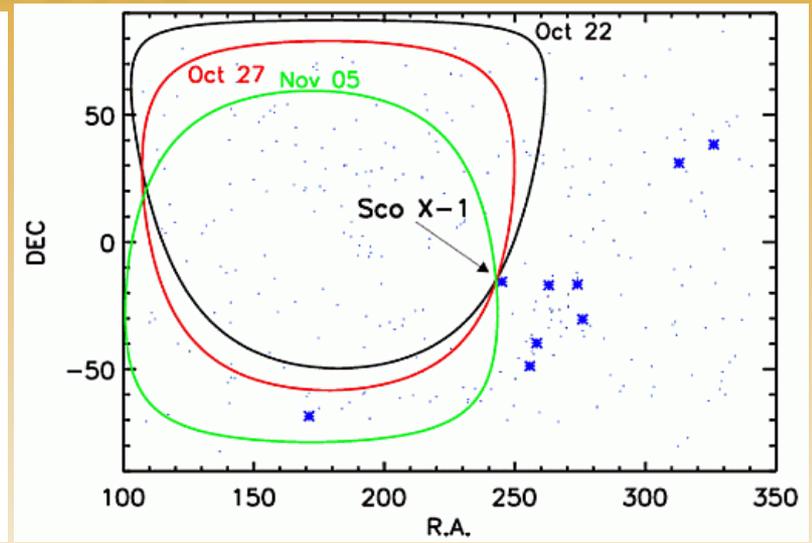

Figure 1. A scheme of X-ray beams within one section of RESIK Bragg spectrometer

# Ongoing & Possible collaborations

- ▣ Skobeltsyn Institute MGU, Moscow
  - Understanding & Calibrations of various RESIK Signals- for quiet and stormy conditions
- ▣ Plasma physics group, SRC Warsaw
  - Understanding signals due to severe storms
- ▣ Lebedev Physical Institute, Moscow
  - Relation between the PIN signals and CCD tracks signal
- ▣ ROB & SPENVIS groups, Belgium
  - Quiet & stormy condition response of PROBA-2
