

Simulation of energetic particle interactions with SphinX PIN detectors using Geant4 platform

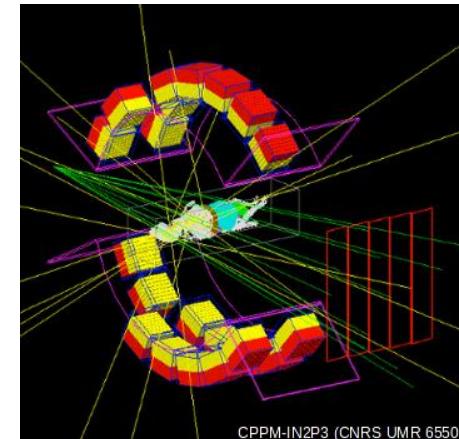

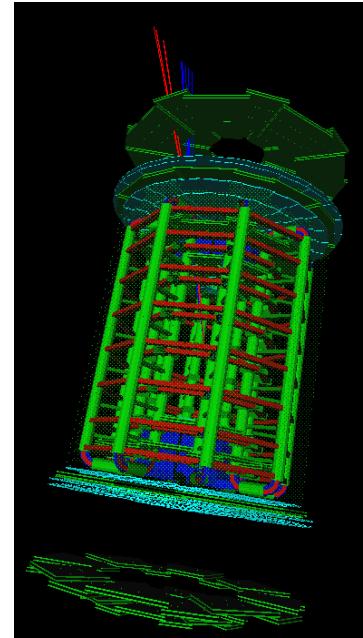

J. Barylak, A. Barylak, P. Podgórski, S. Gburek

21.11.2012, Wrocław

Conference: Progress on EUV & X-ray spectroscopy and imaging
Session 7: Solar Instrumentation Development (part I)

What is Geant4

- "GEometry AND Tracking,,
- Simulation of the passage of particles through matter.
- Application:
 - High energy physic: ATLAS
 - Space and radiation
 - Medical: NMR
 - Technology transfer

Sources:

What is Geant4

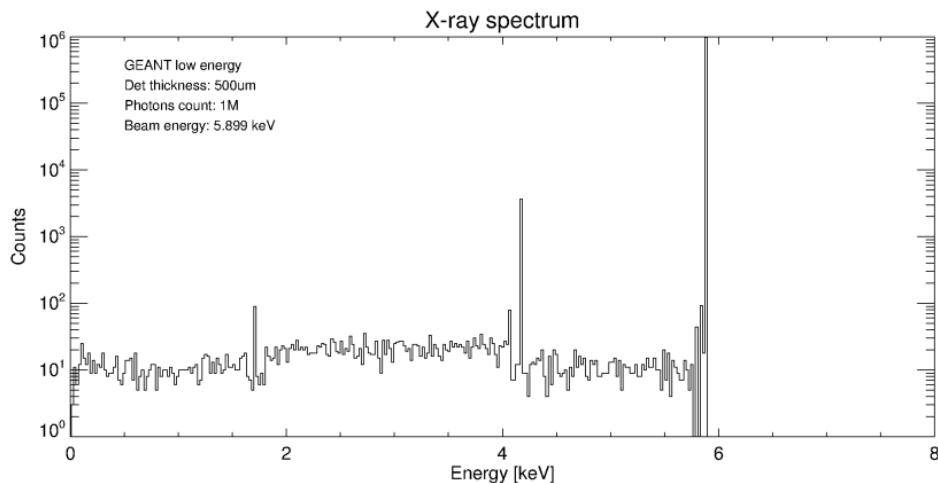

- Set of libraries written in full objective C++
- Method: Monte Carlo
- Aspects of simulation:
 - Geometry
 - Material
 - Particles
 - Tracking
 - Physic process
 - Detector response
 - Data storage
 - Visualisation
 - User interface

Structure of Geant4

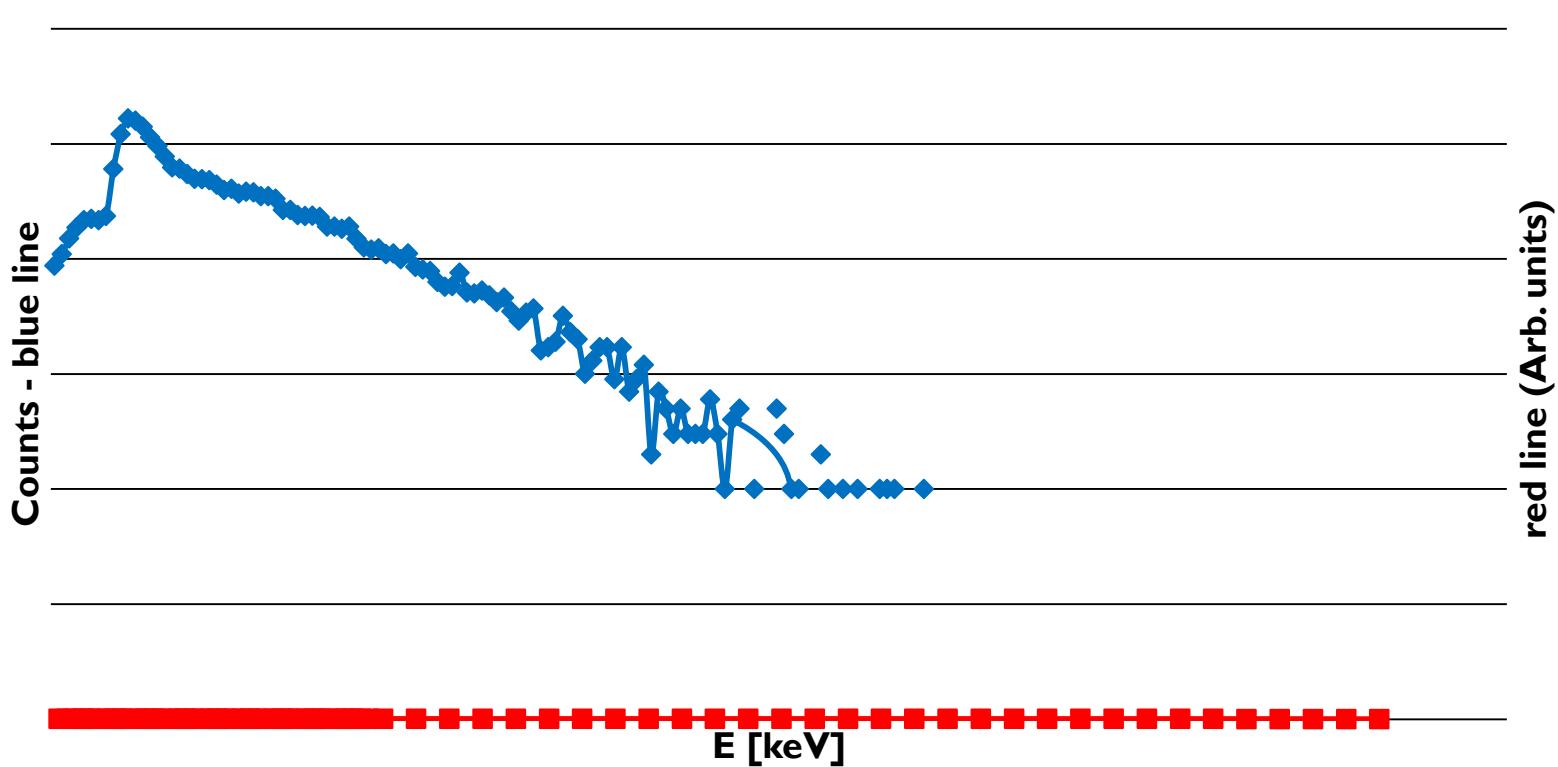

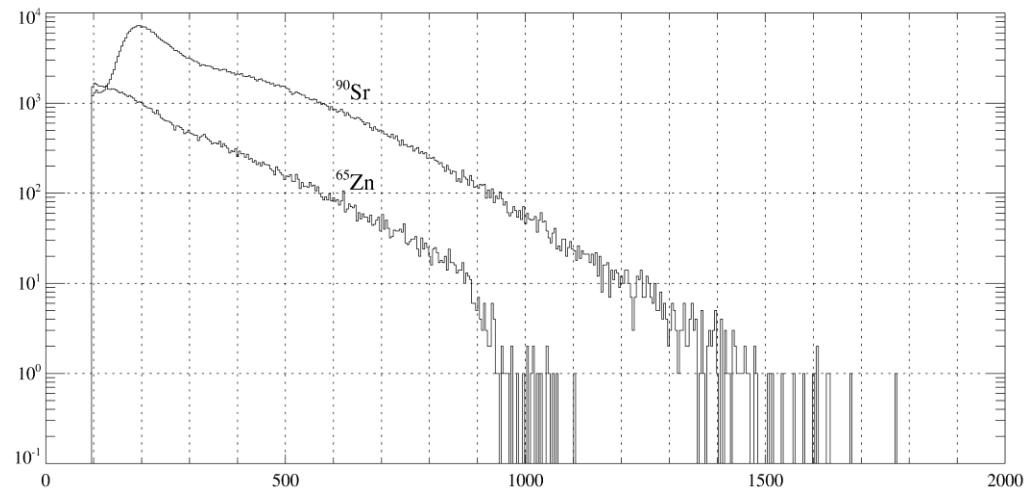

Preliminary physics list – Livermore Model

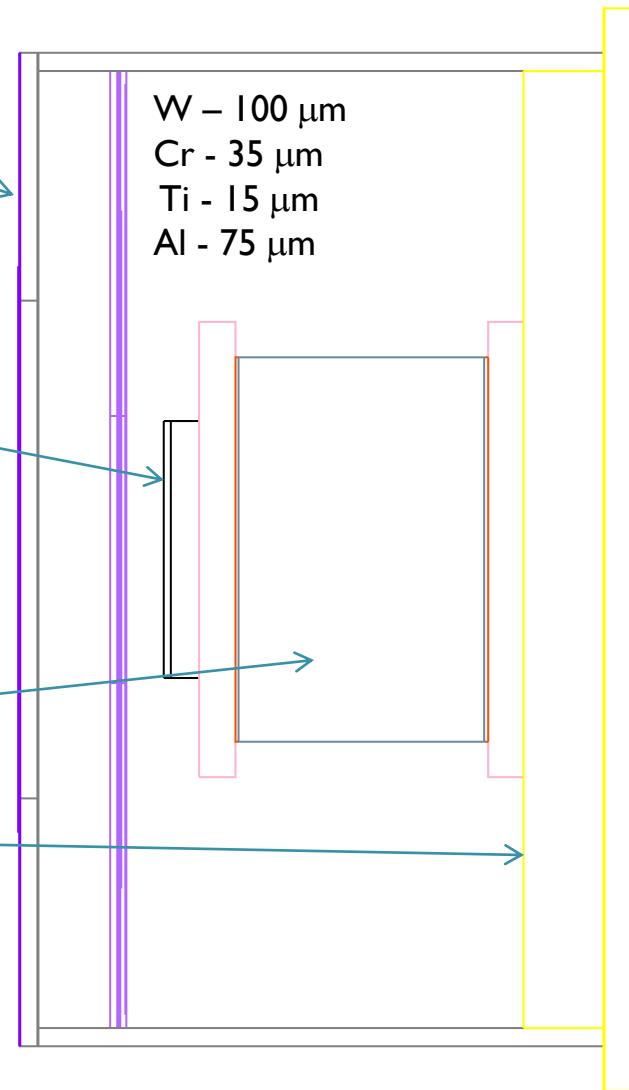

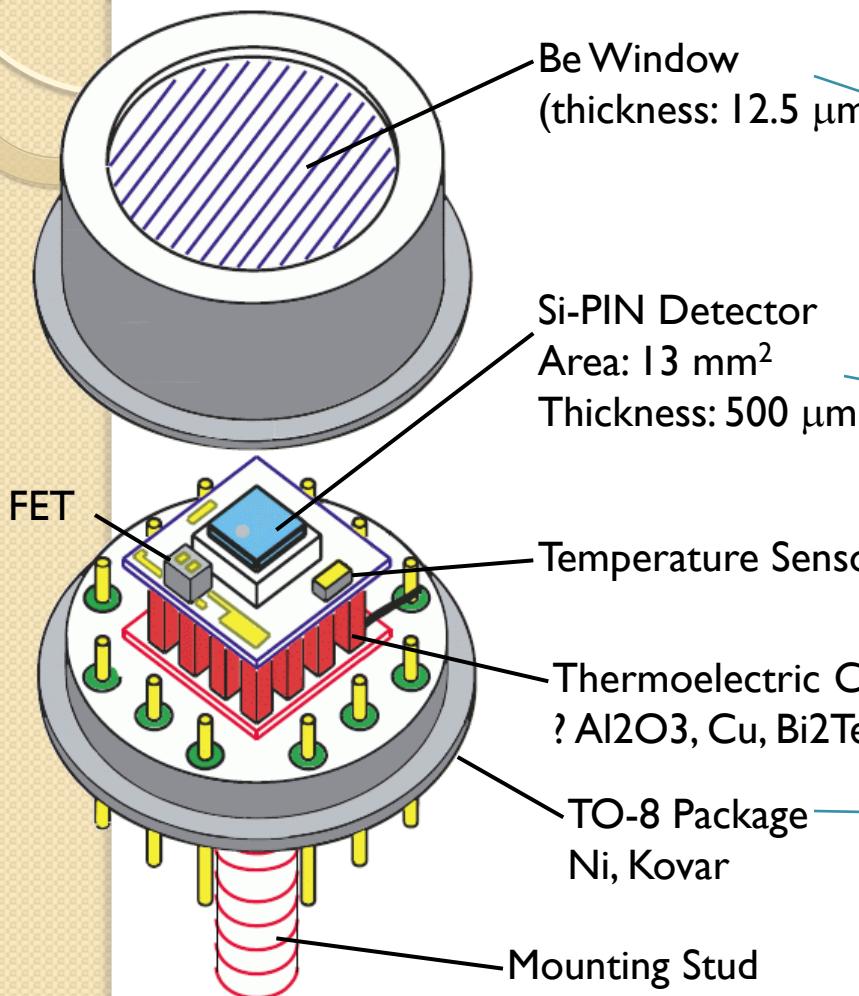

- Particles and processes:
 - Photons :
 - Photoelectric effect,
 - Compton scattering,
 - Electron-positron pair production,
 - Rayleigh scattering.
 - Electrons:
 - Multiple Scattering,
 - Ionization,
 - Bremsstrahlung.
 - Positrons:
 - Multiple Scattering,
 - Ionisation,
 - Bremsstrahlung,
 - Anihilation of pair electron-positron.

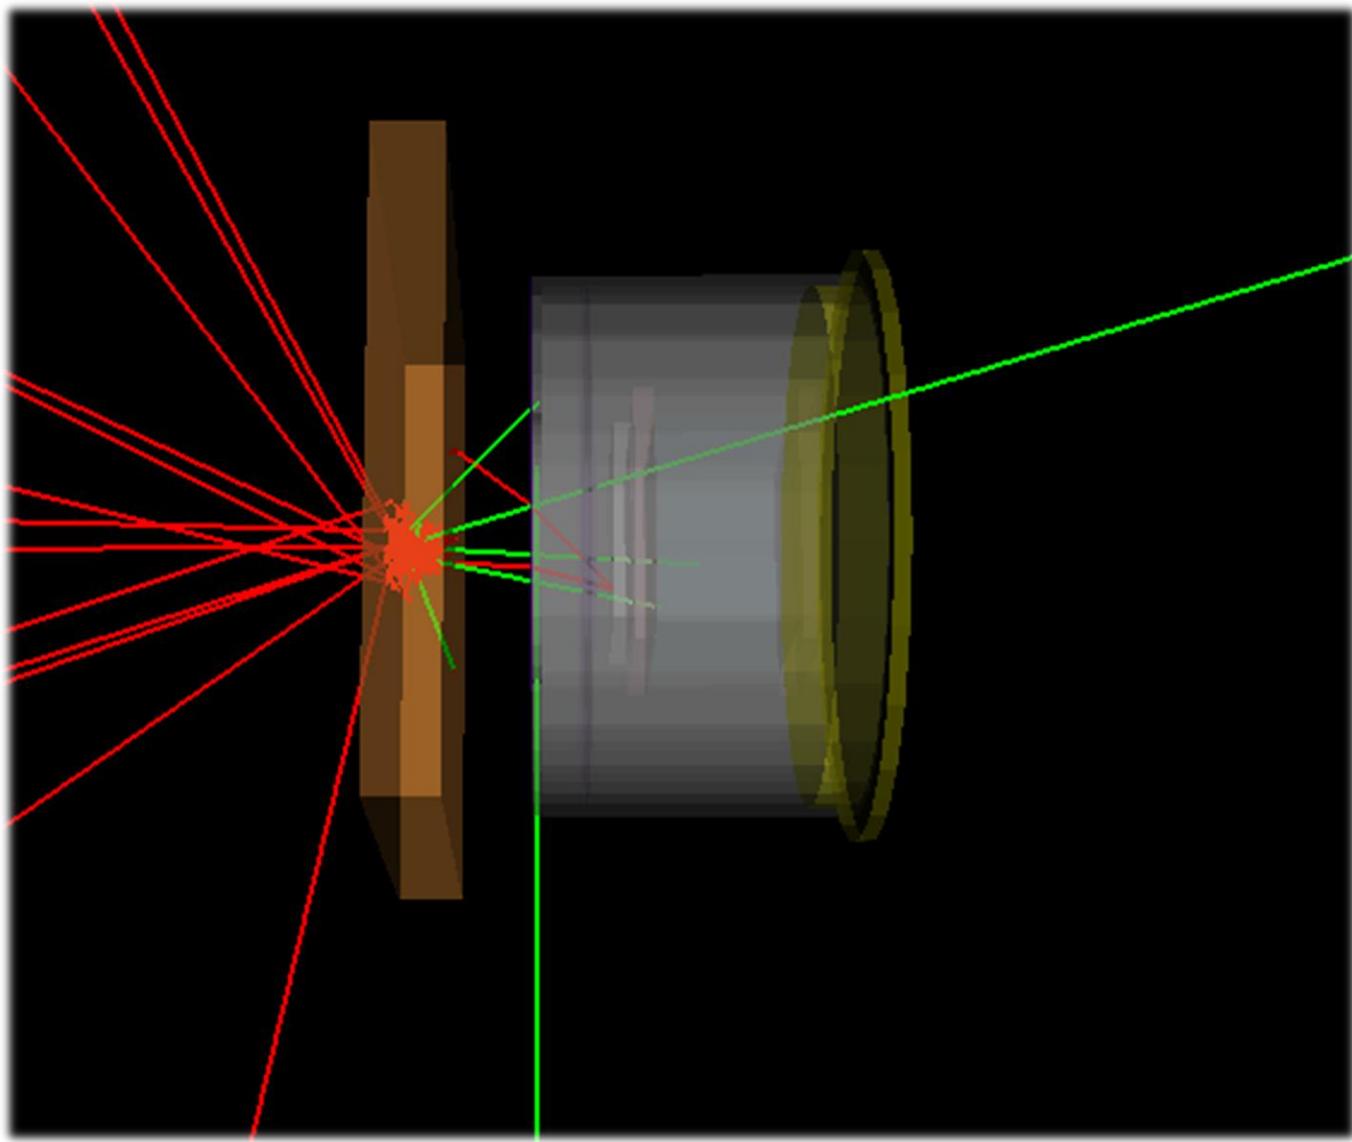

Simulation of Sr^{90} source

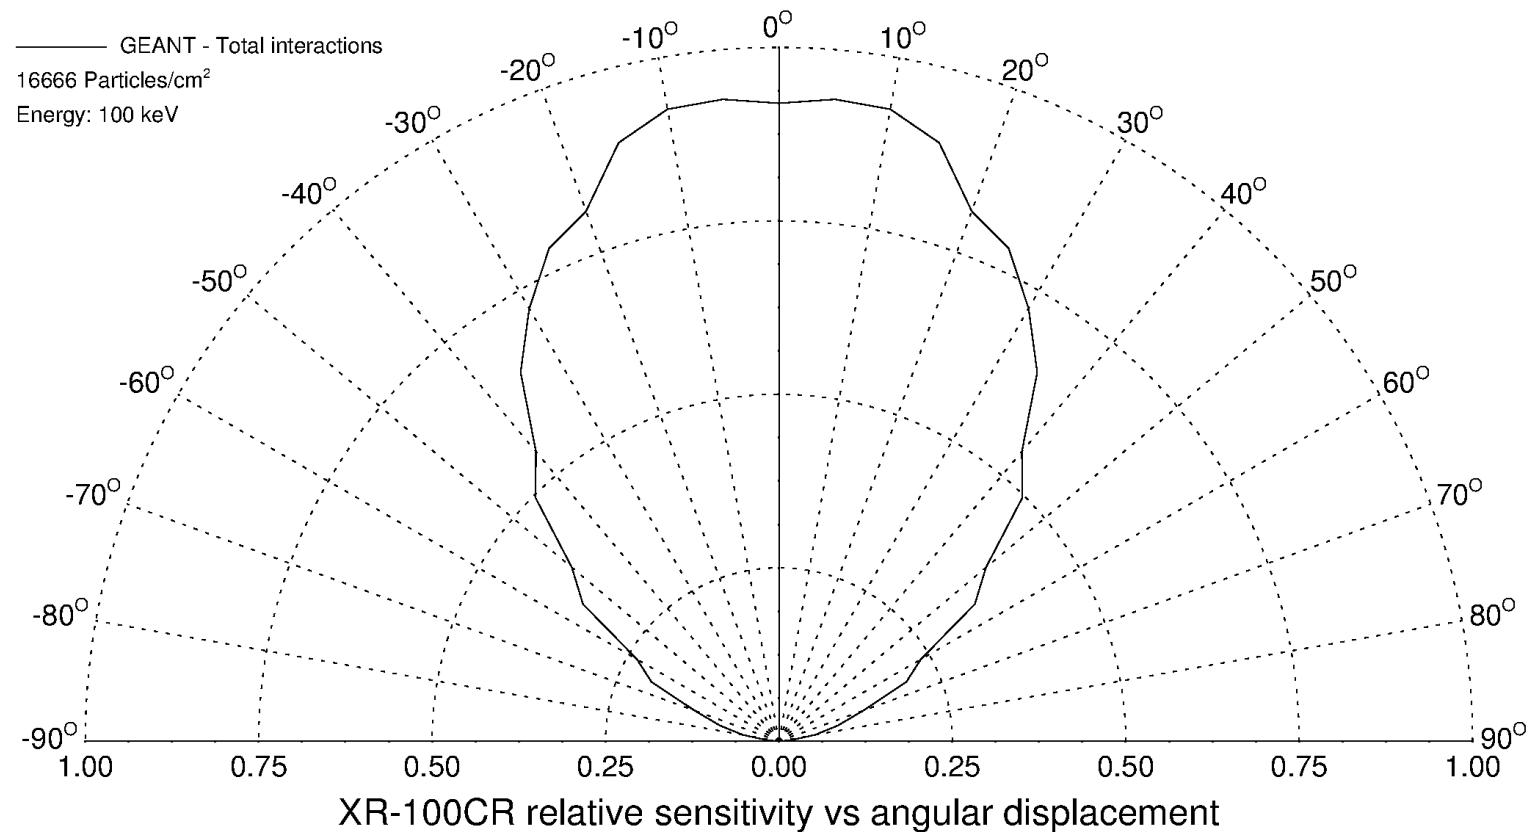

Detector

Test with Al shield

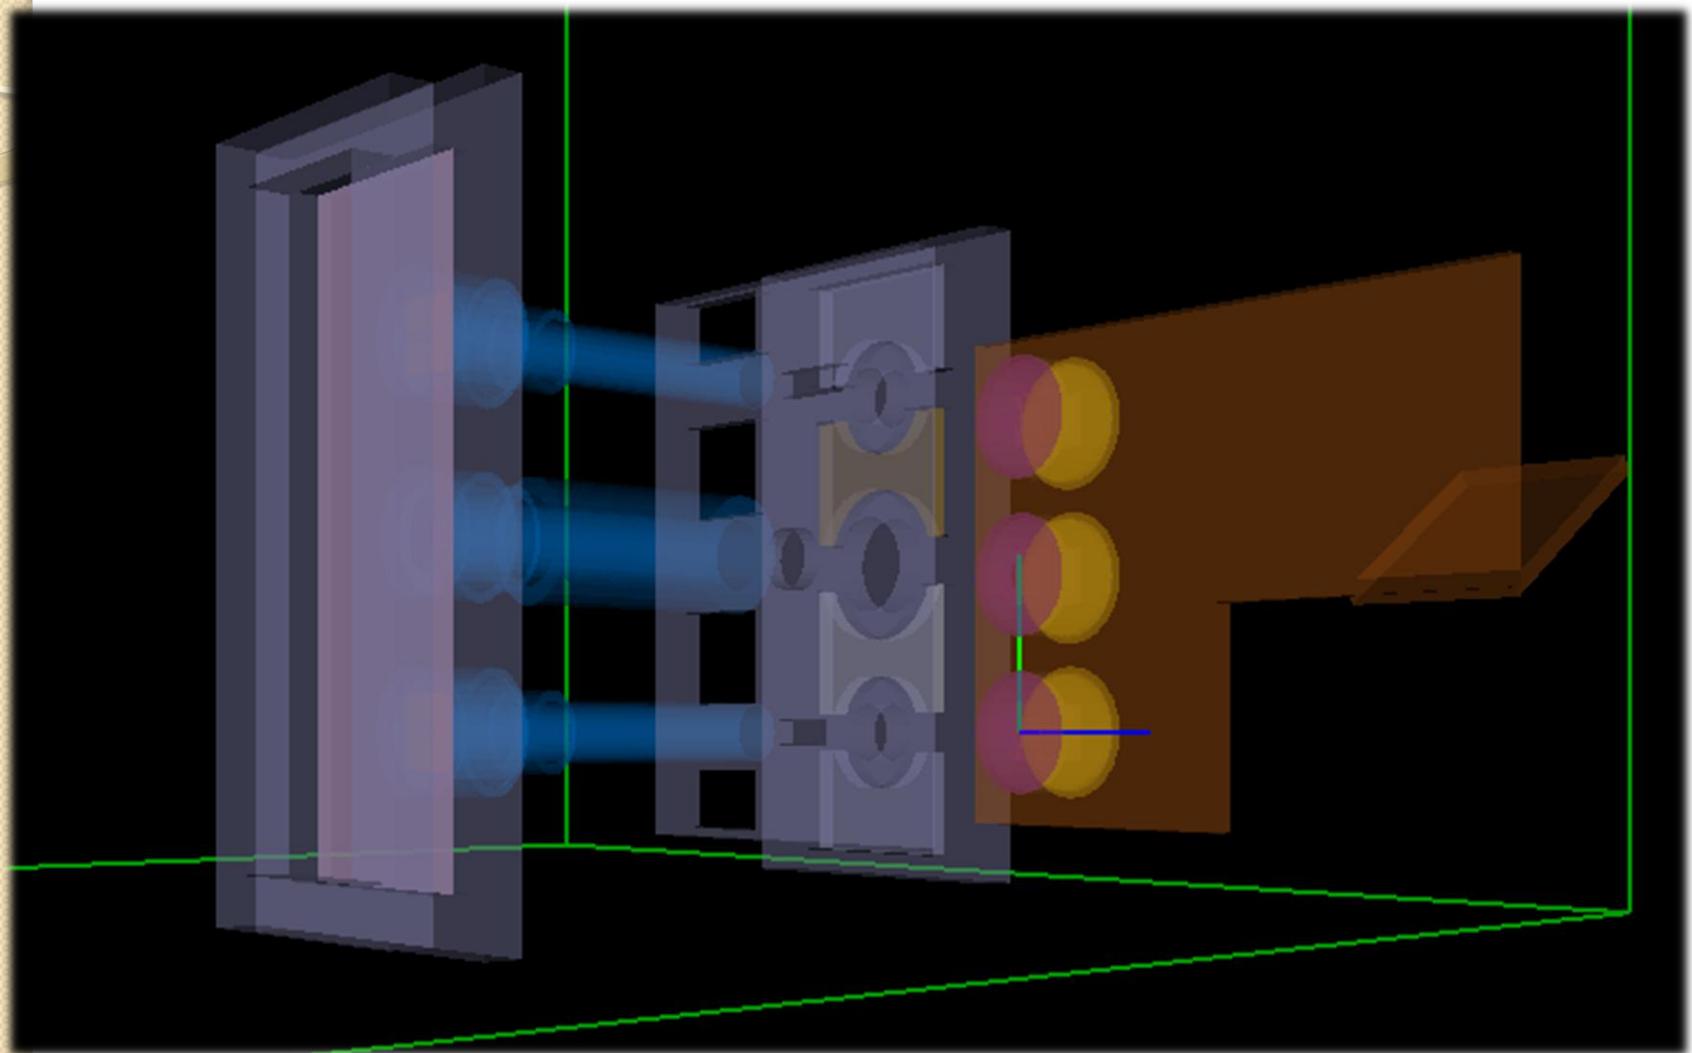

Angular sensitivity to electrons of detector

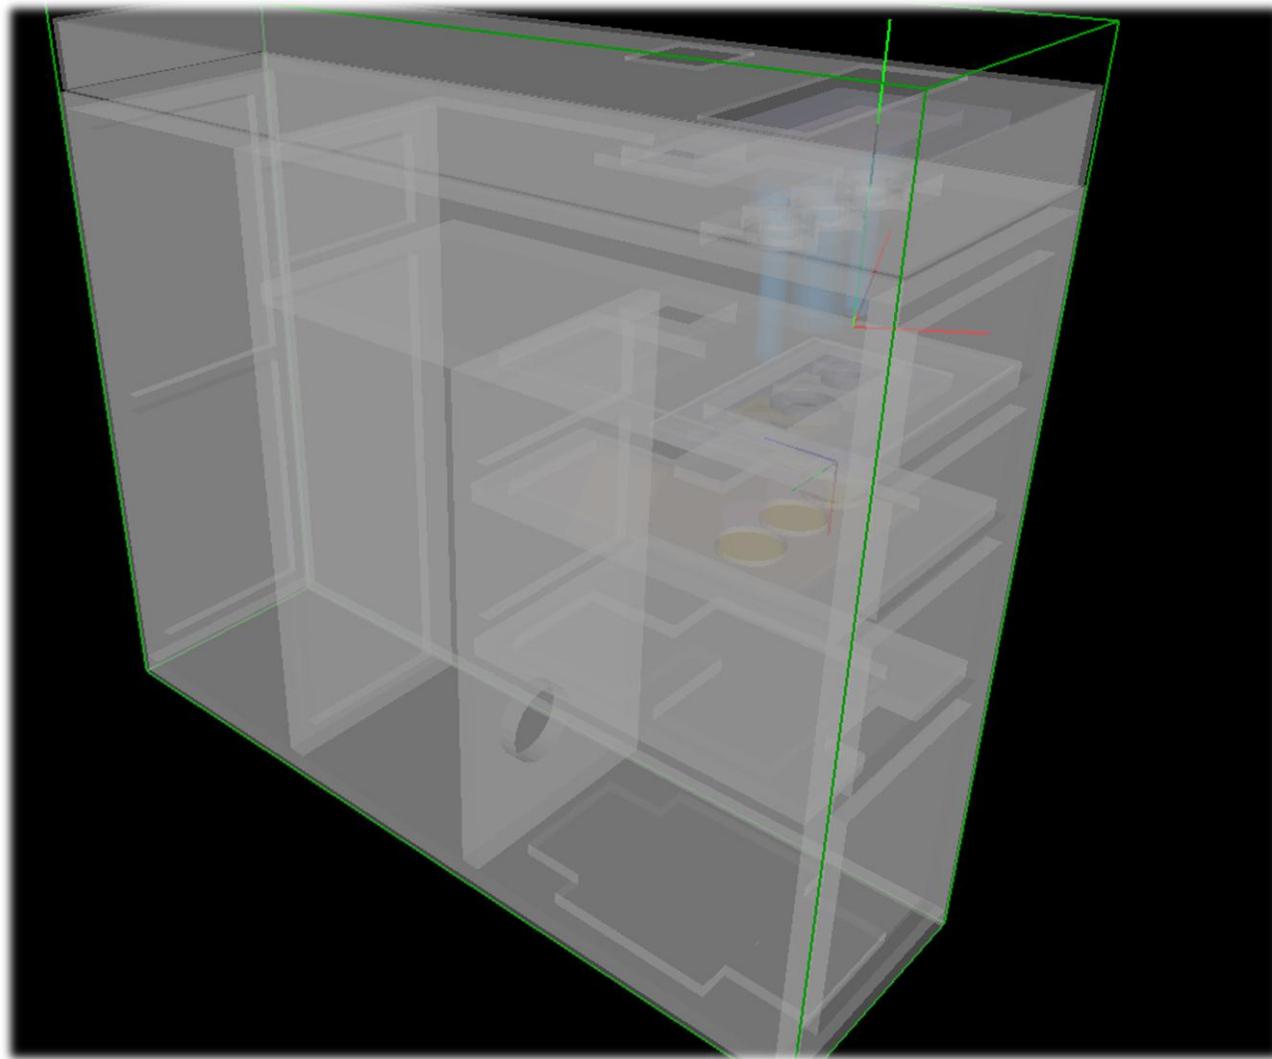

- Uniform spatial distribution covering the entire detector.

Interior of the SphinX

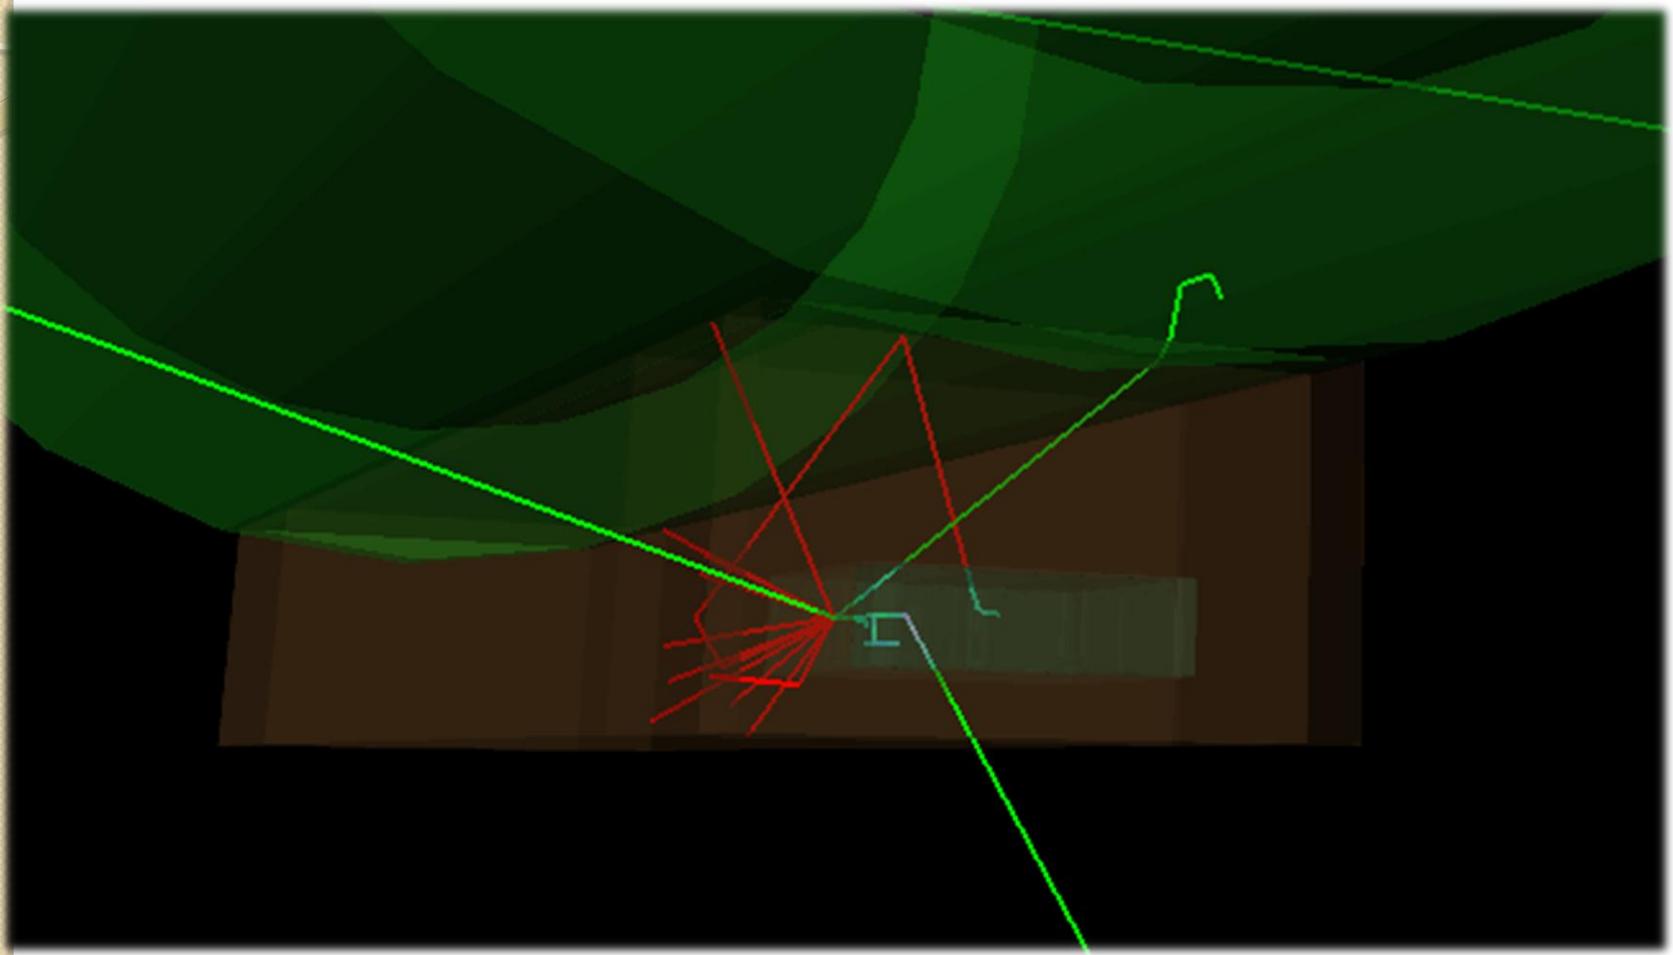

Visualisation of SphinX interior

SphinX

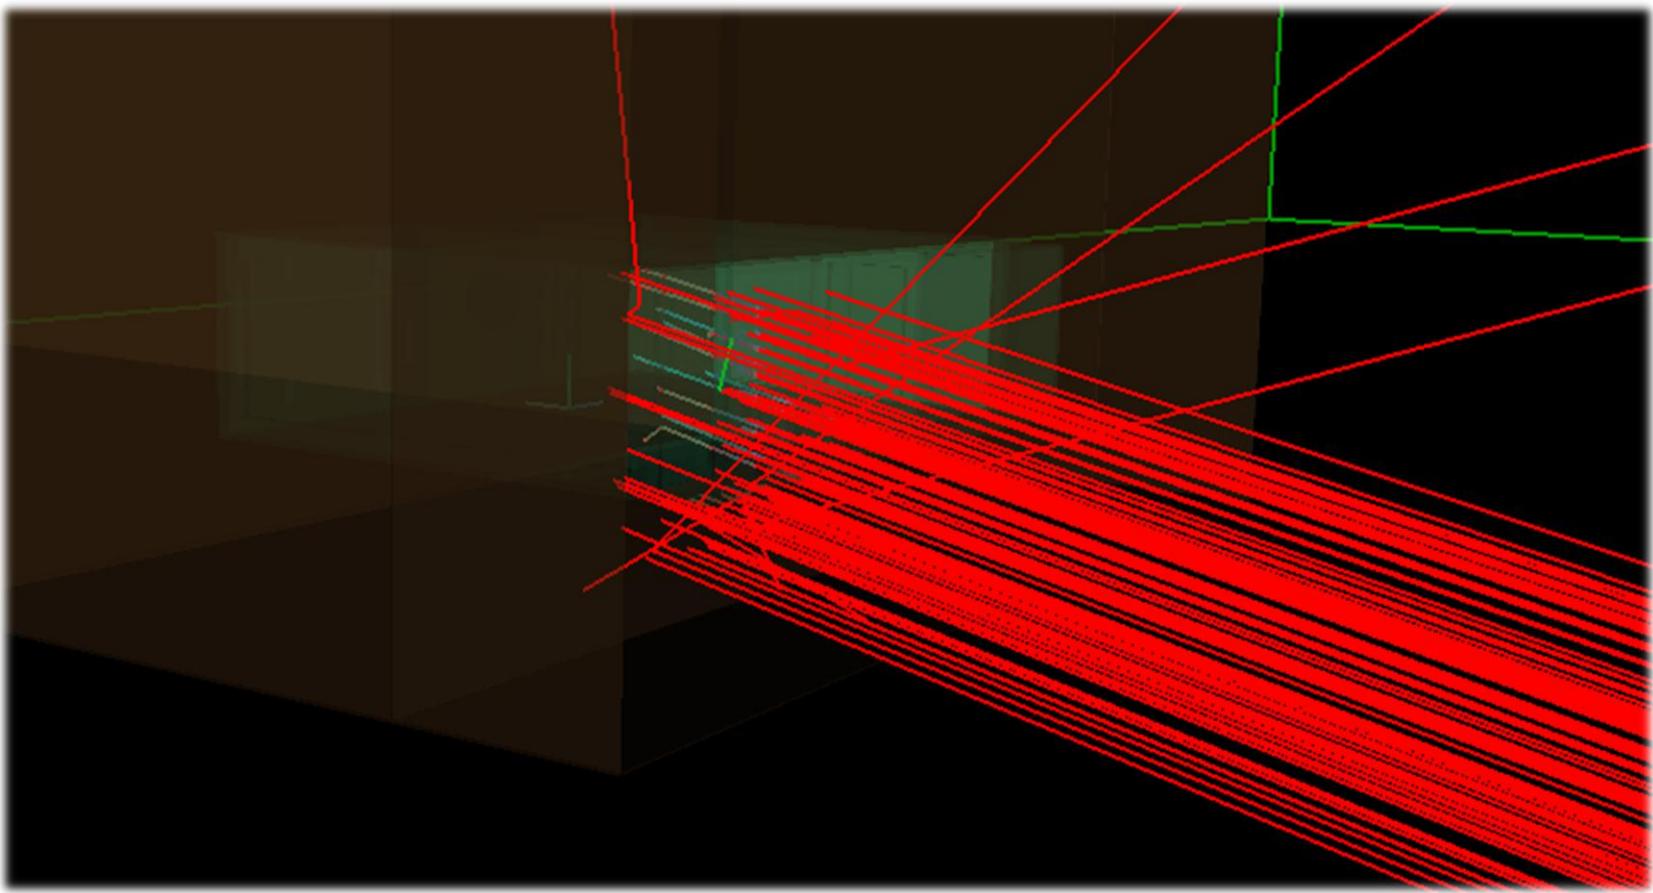

Visualisation of model SphinX

Visualisation

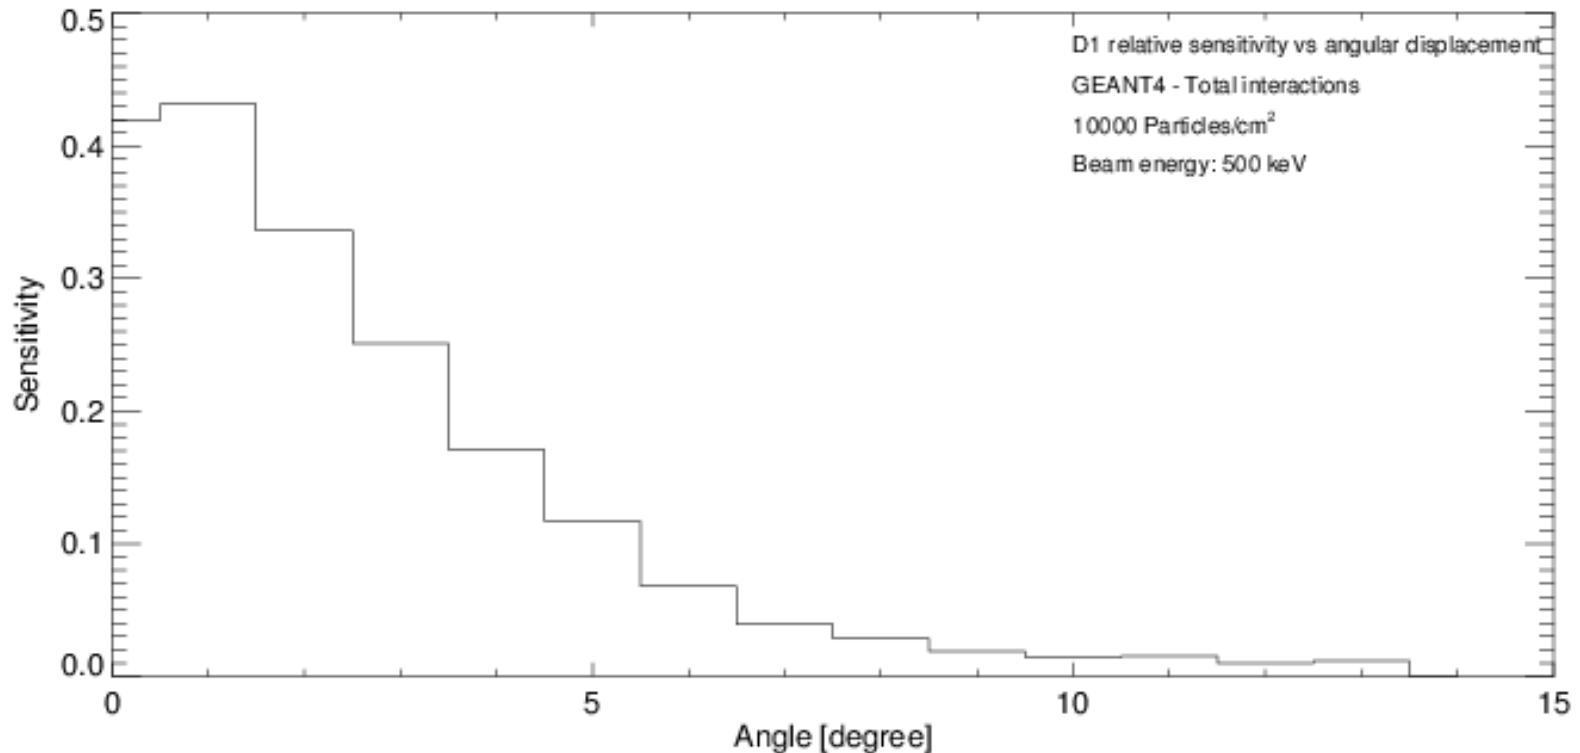

Visualisation of model SphinX inside TESIS with CORONAS-PHOTON

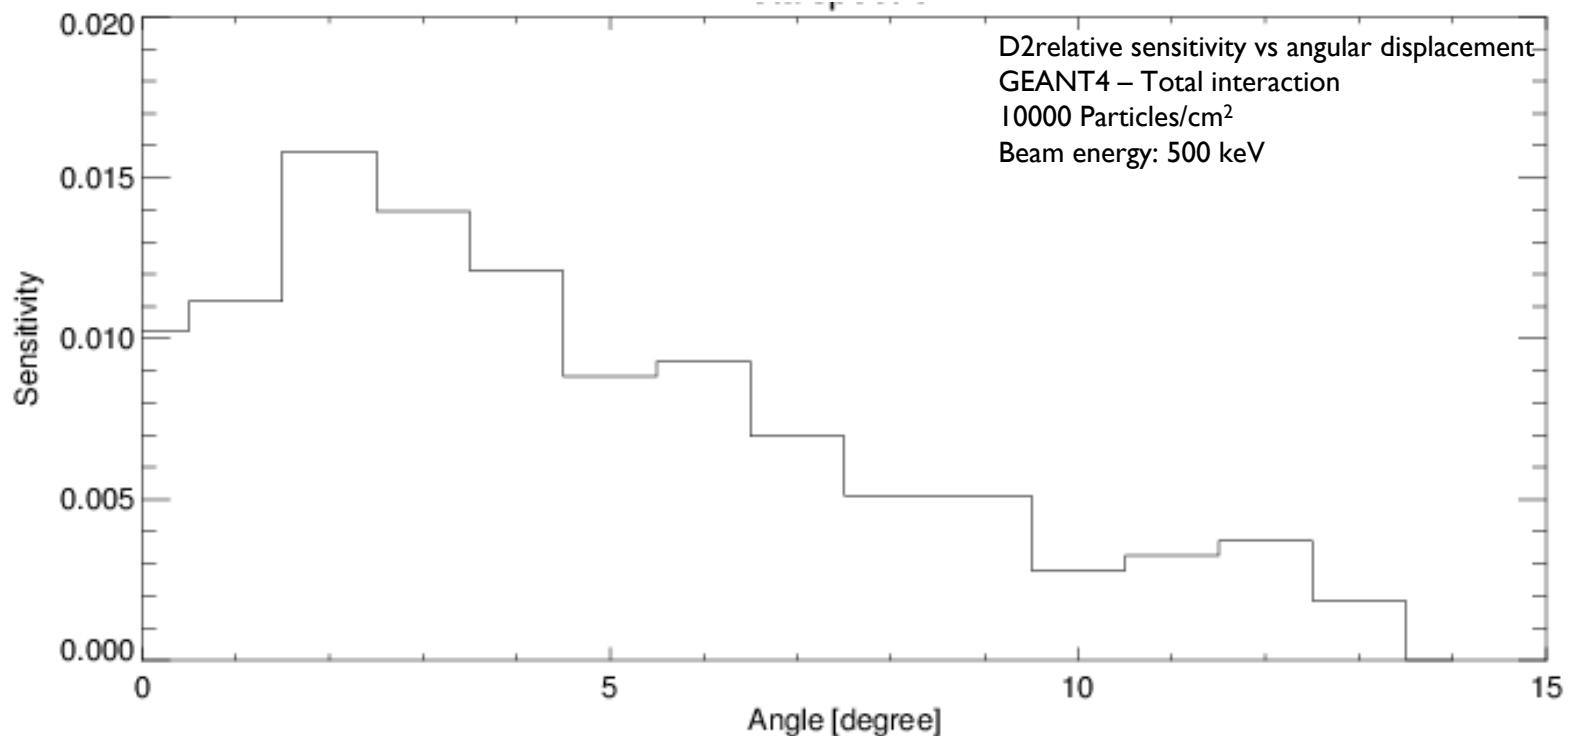

Visualisation of performed simulation

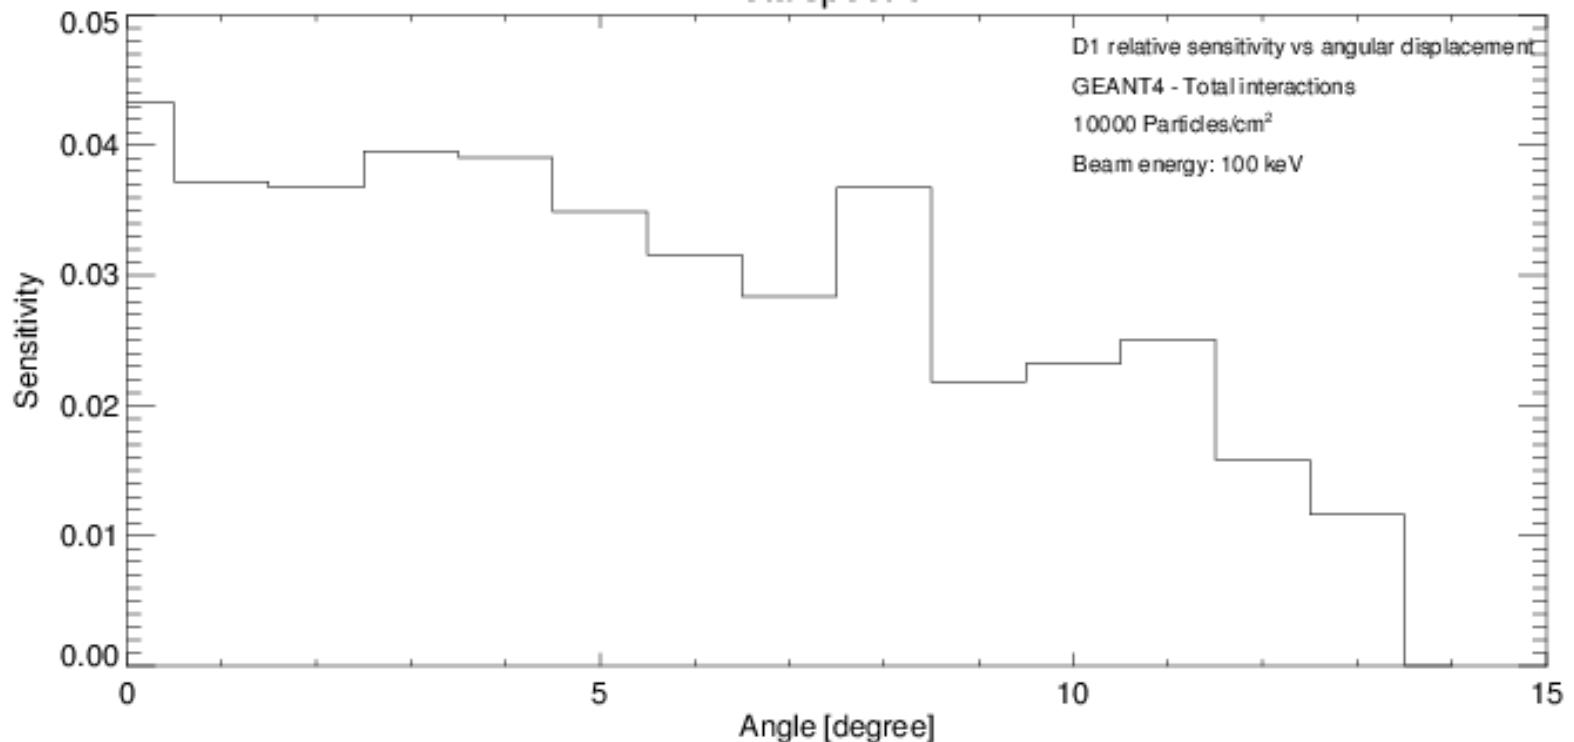

Angular sensitivity on 500 keV electrons for Sphinx D1

Angular sensitivity on 500 keV electrons for Sphinx D2

Angular sensitivity on 100 keV electrons for Sphinx D1

THANK YOU
