

Elementary flare profile (EFP) fit to X-ray light curves registered by STIX - Continuation

Made by:
Karol Kułaga

Astronomical Institute, University of Wrocław

Elementary Flare Profile

$$f(t) = \frac{1}{2} \sqrt{\pi} A C \exp\left[D(B-t) + \frac{C^2 D^2}{4}\right] \left[\operatorname{erf}(Z) - \operatorname{erf}\left(Z - \frac{t}{C}\right) \right]$$

$$f(t) = \int_0^t g(x) h(t-x) dx$$

$$g(x) = A \exp\left(-\frac{(x-B)^2}{C^2}\right)$$

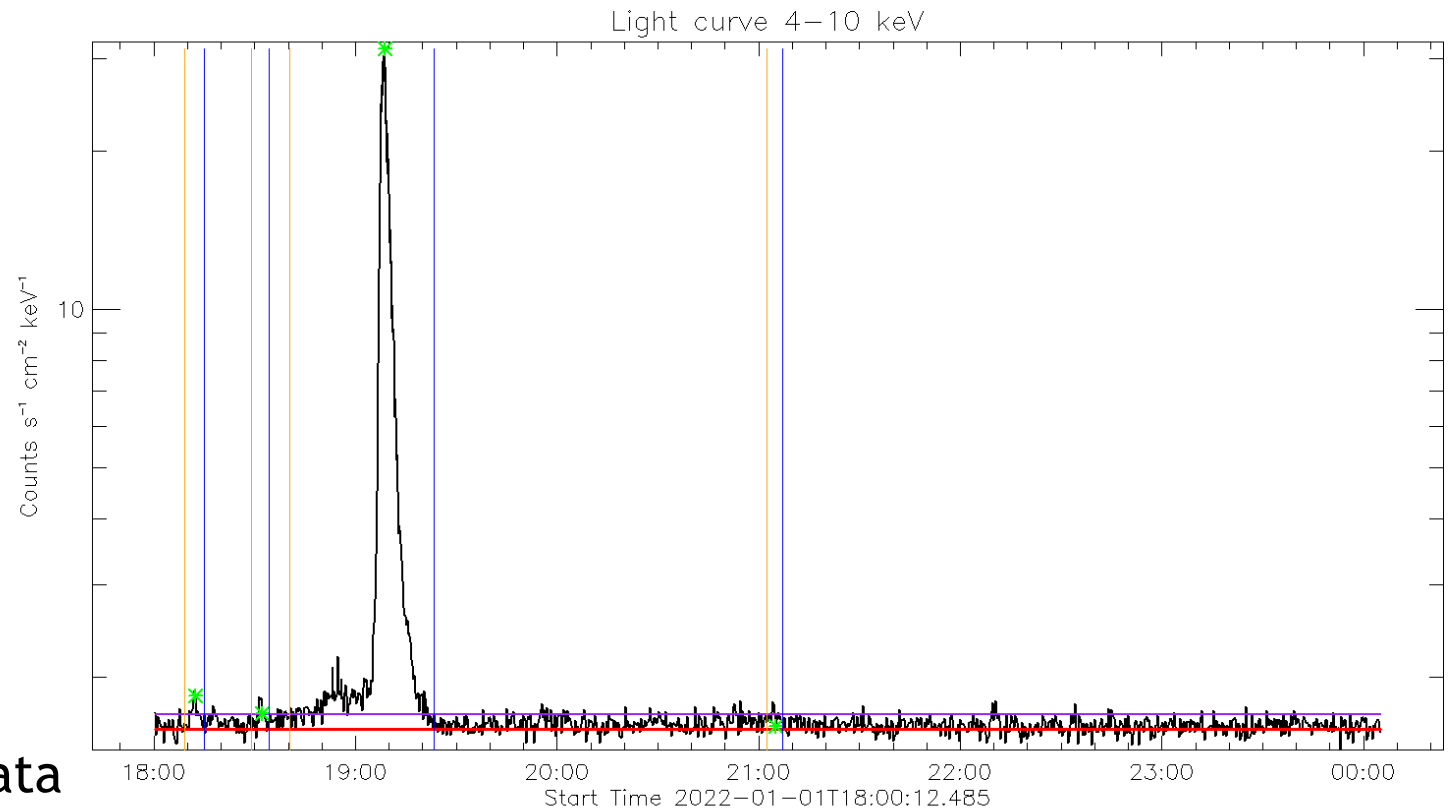

$$h(x) = \exp(-Dx)$$

$$Z = \frac{2B + C^2 D}{2C}$$

Figure 3 The model of the soft X-ray flare time profile $f(t)$ results from the convolution of a Gaussian function describing the energy release rate $g(x)$ (Equation (2)) with an exponential decay function $h(x)$ describing energy dissipation (Equation (3)).

Automatic EFP fit

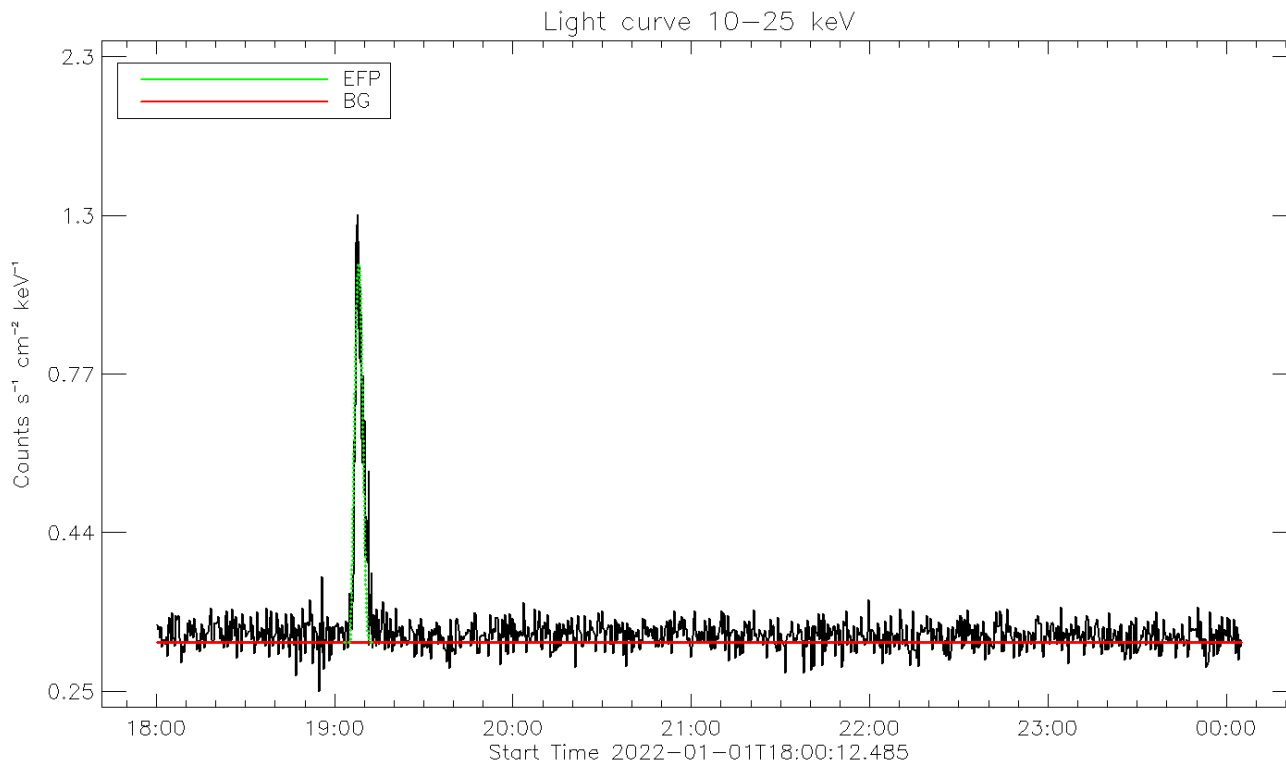

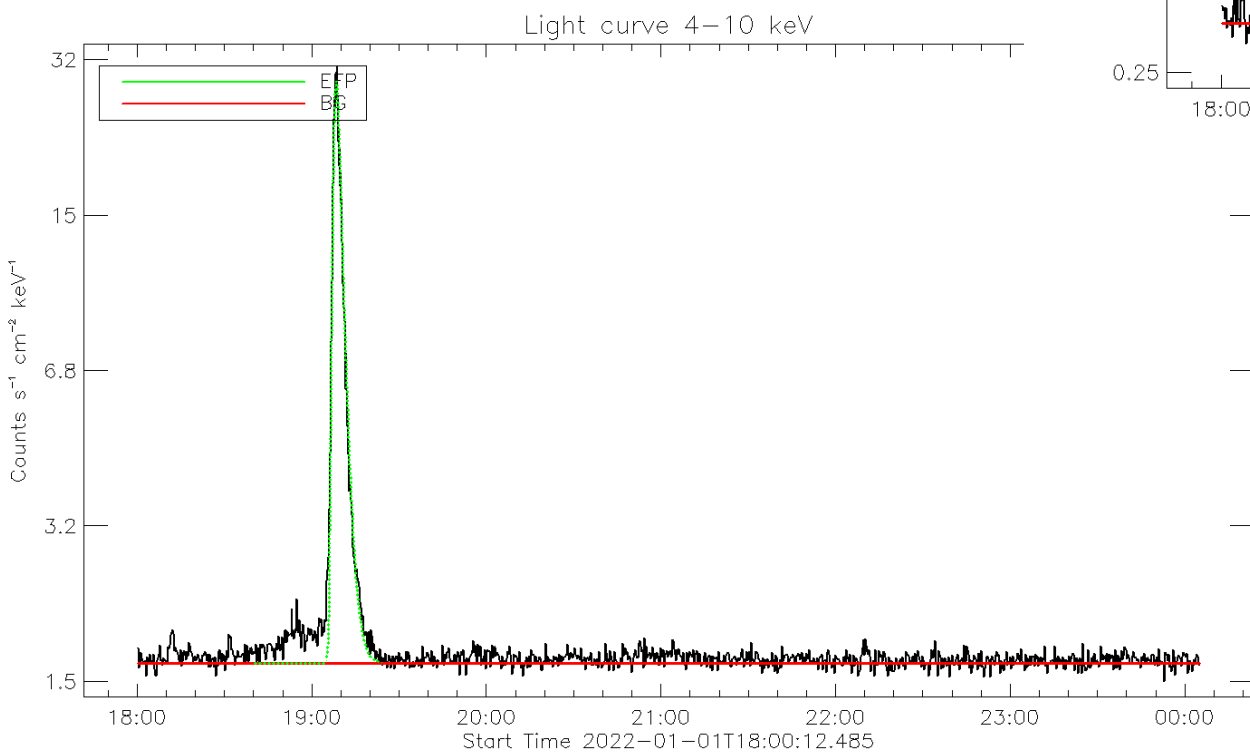

- ▶ Compare background level with data
- ▶ Smooth with 9 points and again with 3 points
- ▶ Searching for extremas
- ▶ Checking if found extremas are for this same flare/flares (limit above background)
- ▶ Combining extremas if counts are above the limit
- ▶ Parameter randomization 150 000 Times and using MpFit

Light curve 4–10 keV

2022-Jan-01 19:08:39

2022-Jan-01

19:08:39

Black - Vth+Thick2

Red - Thermal component (Vth)

Blue - Nonthermal component (Thick2)

Orange - Observed spectrum

Ec - Cutoff energy

01-Jan-22 18:40:22.085

Example for automatic fit from January 2022; 219 EFP and 479 rejected flares (multiple peaks, bad fits)

$$f(t) = \frac{1}{2}\sqrt{\pi}AC \exp\left[D(B-t) + \frac{C^2D^2}{4}\right] \left[\operatorname{erf}(Z) - \operatorname{erf}\left(Z - \frac{t}{C}\right)\right]$$

Example of flare with estimated amplitude and FWHM

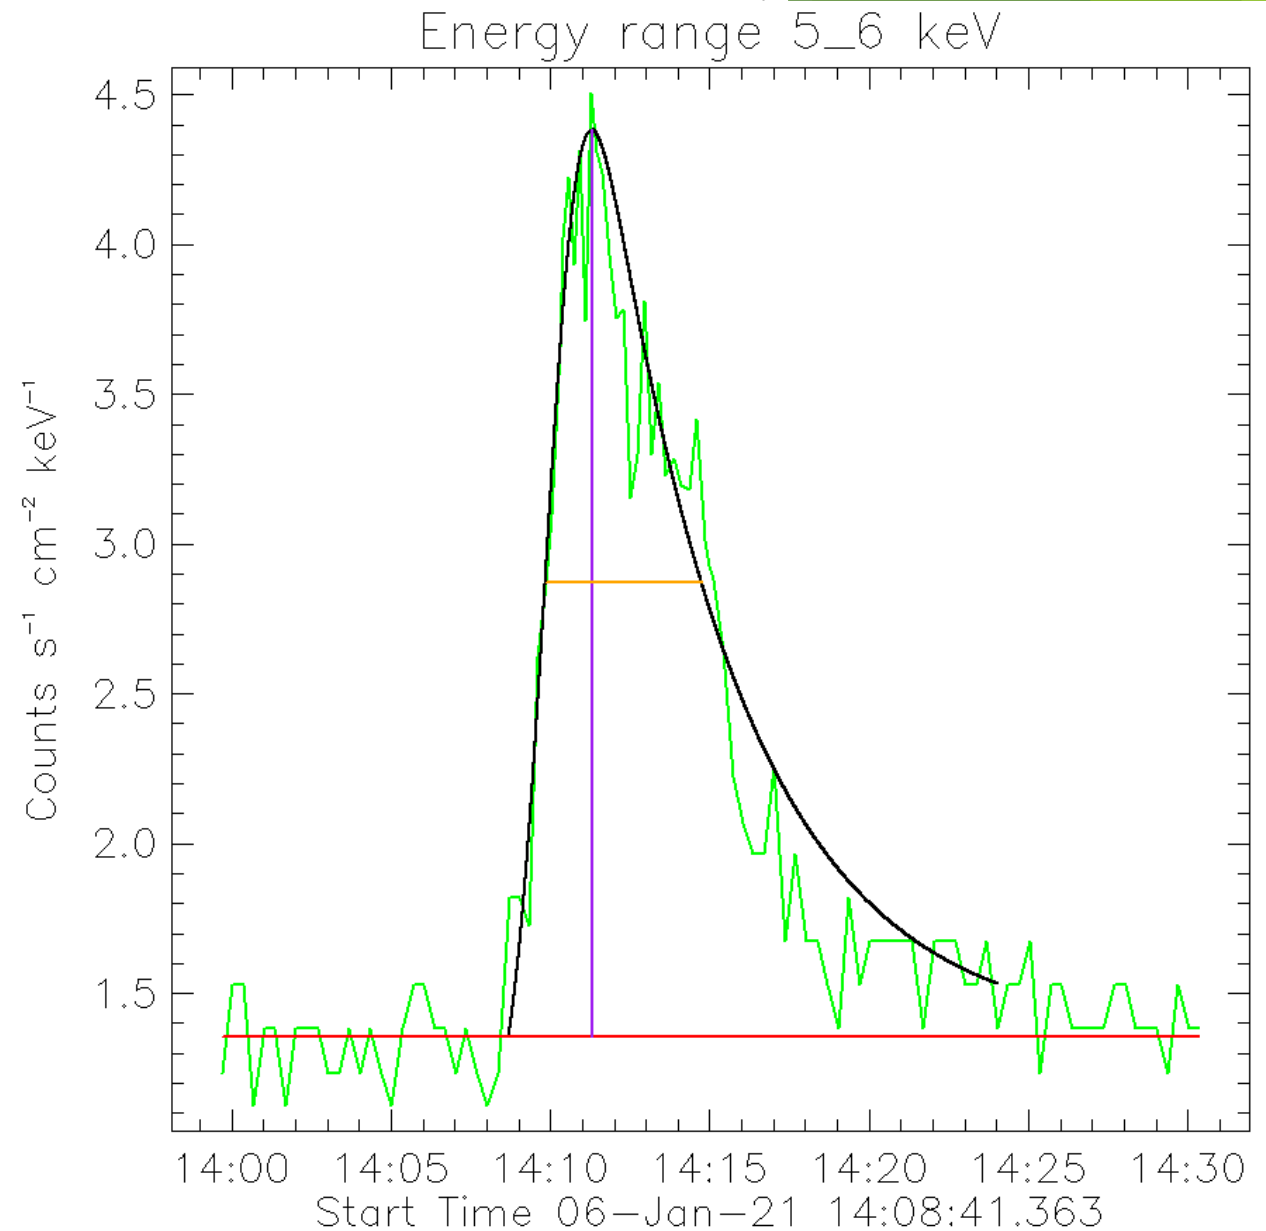

Green - Original Data

Black - Elementary flare profile

Red - Background

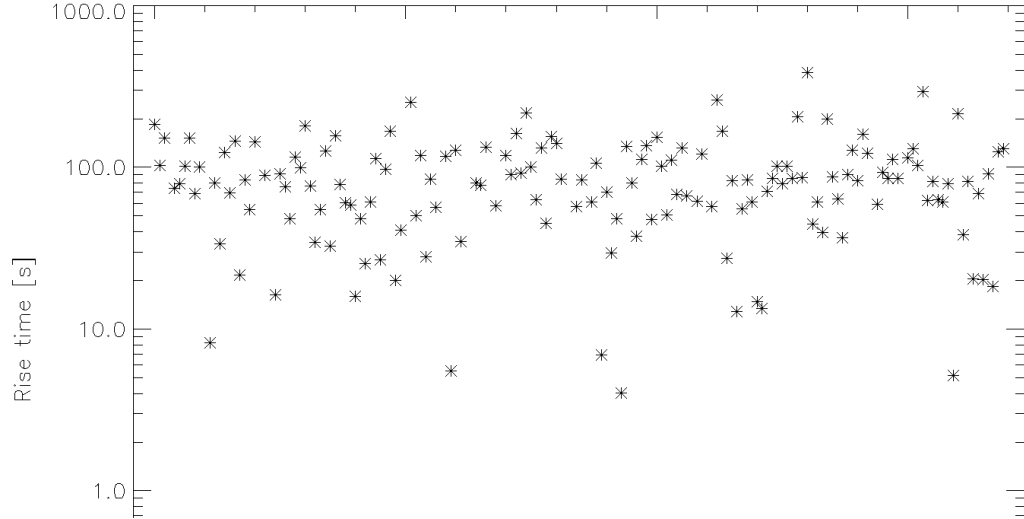

Purple - Profile Amplitude

Orange - Flare FWHM

Flare amplitude, duration, rise time and Decay time

Rise time of 170 flares in 5–6 keV

Flares average amplitudes

Flares average time

Flares amplitudes in 5–6 keV

Flares average rise time

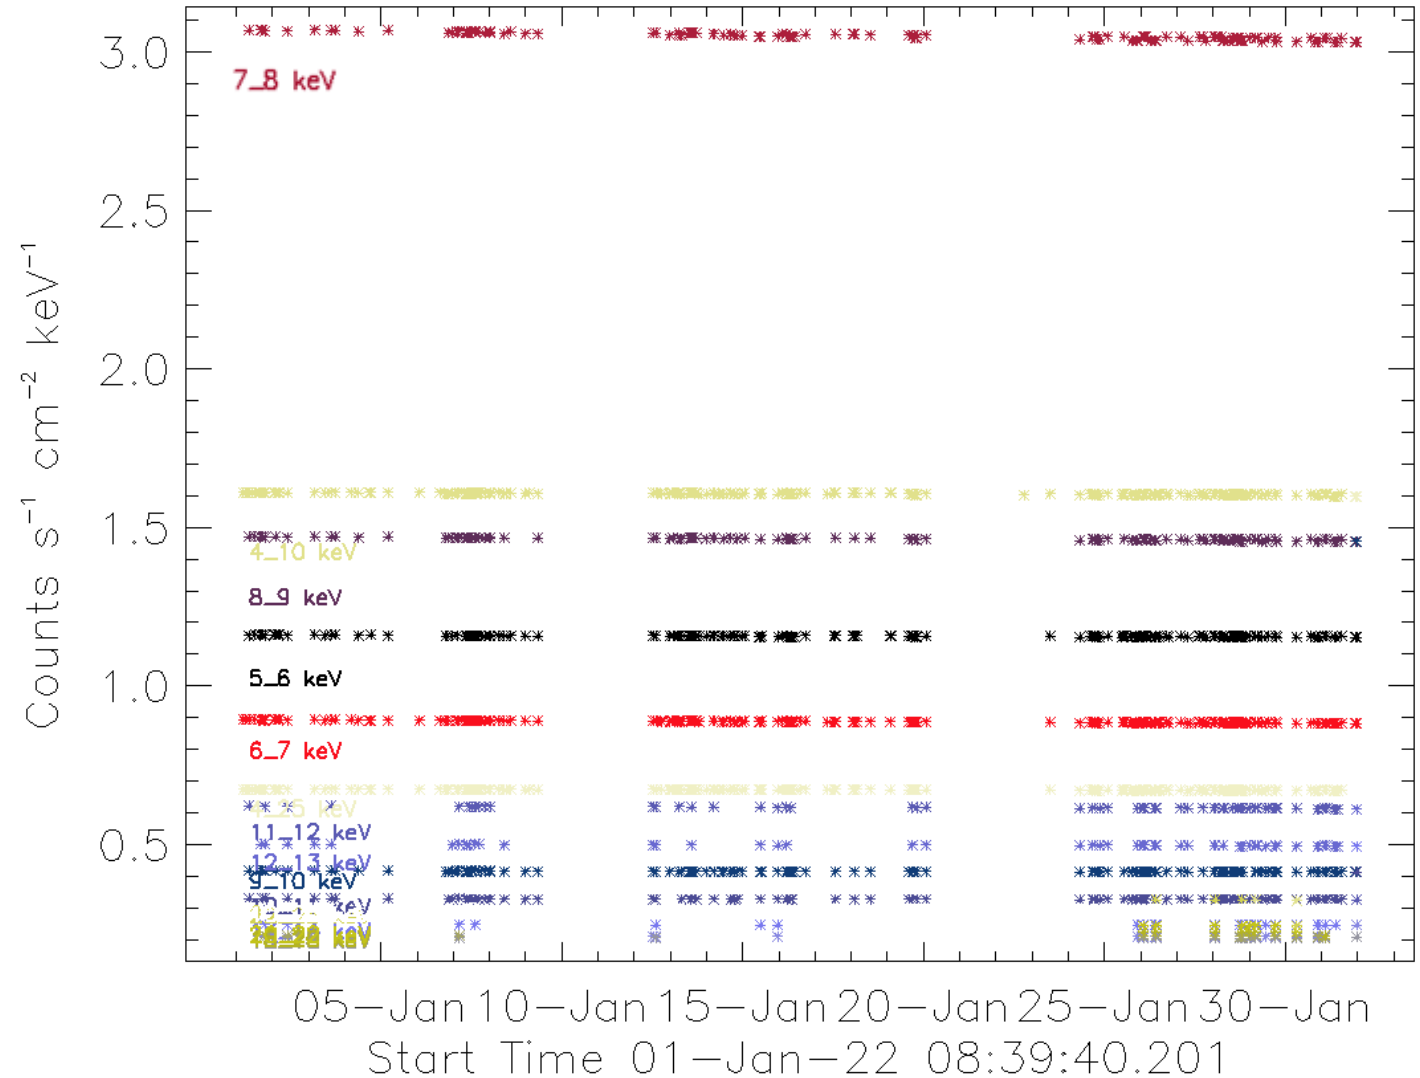

Flares average decay time

Interpolated background level

Background level is slowly decreasing

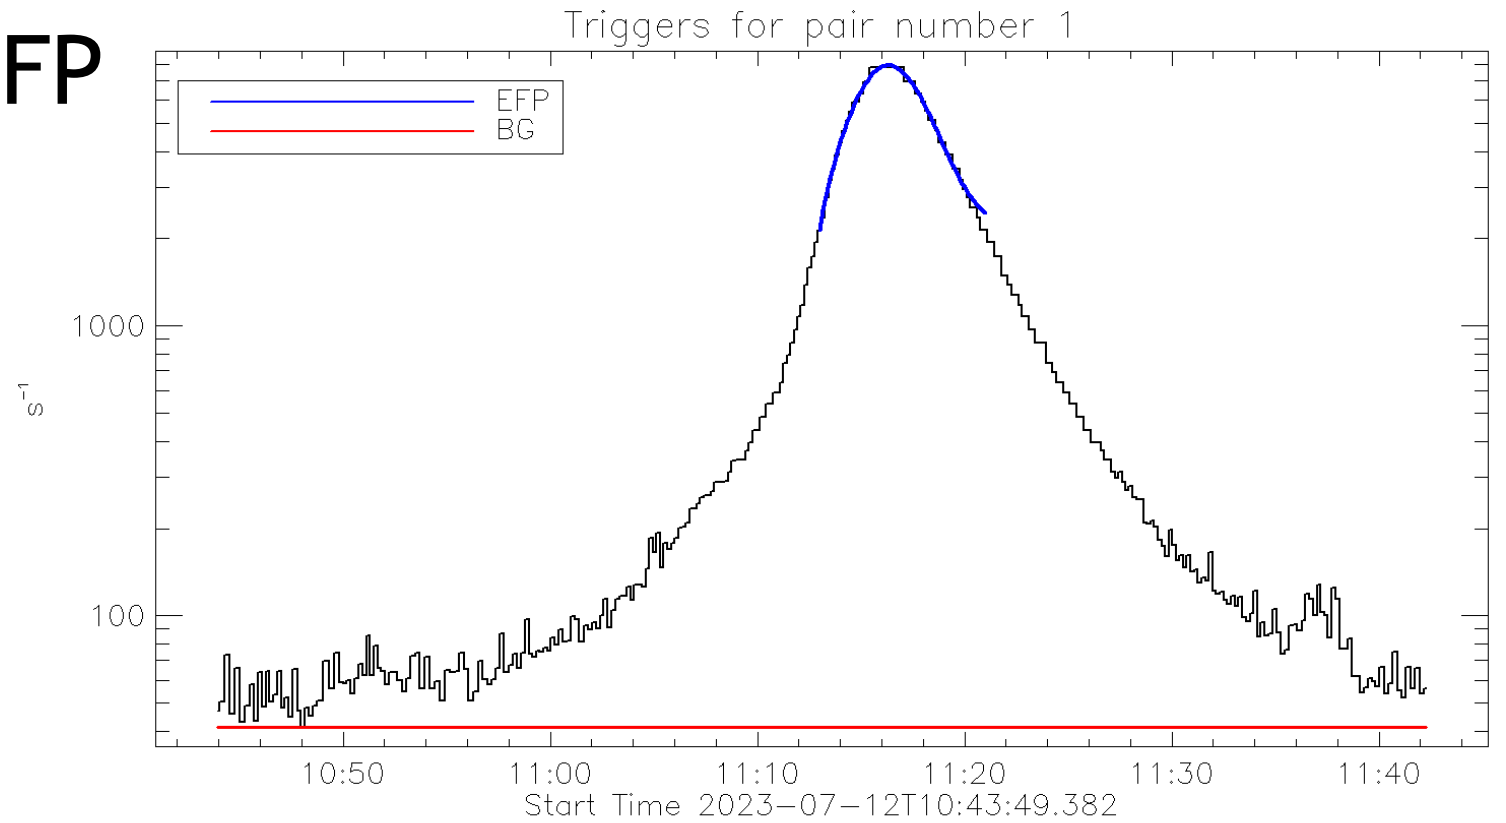

30 detectors and 12 pixels were used to determine background from background files

Summary

- ▶ Almost 30% of automatic found flares are EFP (Jan. 2022)
- ▶ Algorithm will search for flares from January 2022 to July 2023
- ▶ Simple flares (EFP) will be selected from found events to future work

Triggers fitted with EFP at 3/4 amplitude

Thank You for the attention

The slide features a white background with a decorative graphic on the right side. This graphic consists of several overlapping, semi-transparent green shapes in various shades, ranging from light lime green to dark forest green. These shapes are primarily triangular and polygonal, creating a dynamic, layered effect. A thin, light gray line also runs diagonally across the right side, intersecting the green shapes.

Background level at current distance
